As you can see from the diagram above, the P-Set consists of two pickups. Both pickups are identical in size and shape. Either can be used for the E-18 Strings or the E-19 Strings. The only difference between them is the connector on the bottom of the pickup.

All EMS-e2 Pickups are compatible with each other. The connector system is an easy method of installation, avoiding the need to solder.

EMS Accessory Circuits like the RUFF, ERS, BTC or BOC Controls can be added to any EMS Pickup System, all have buffered inputs and can be used on either passive or active pickups. The R152 Box Included with the set will be used on instruments that use a selection switch.

It is common practice to ground both the shell of an instrument that uses passive pickups to reduce noise. This means there will be a wire coming from the bridge into the control cavity that will be hooked to one of the pots. Included with the EMG-RZ System is a single black wire with a connector on it called an RSC connector that will, attach to the existing ground wire and will provide the correct least-to connection.
