O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world Organic geochemistry of natural waters E.M. Thurman, 2012-12-06 This book is written as a reference on organic substances in natural waters and as a supplementary text for graduate students in water chemistry The chapters address five topics amount origin nature geochemistry and characterization of organic carbon Of these topics the main themes are the amount and nature of dissolved organic carbon in natural waters mainly fresh water although seawater is briefly discussed It is hoped that the reader is familiar with organic chemistry but it is not necessary The first part of the book is a general overview of the amount and general nature of dissolved organic carbon Over the past 10 years there has been an exponential increase in knowledge on organic substances in water which is the result of money directed toward the research of organic compounds of new methods of analysis such as gas chromatography and mass spectrometry and most importantly the result of more people working in this field Because of this exponential increase in knowledge there is a need to pull together and summarize the data that has accumulated from many disciplines over the last decade Photoassimilate Distribution Plants and Crops Source-Sink Relationships Eli Zamski, Arthur A.

Schaffer, 2017-09-29 Adopting an interdisciplinary approach to the study of photoassimilate partitioning and source sink relationships this work details the major aspects of source sink physiology and metabolism the integration of individual components and photoassimilate partitioning and the whole plant source sink relationships in 16 agriculturally important crops The work examines in detail the components of carbon partitioning such as ecology photosynthesis loading transport and anatomy and discusses the impact of genetic environmental and agrotechnical factors on the parts of whole plant source link physiology Horizons of Bioenergetics Anthony San Pietro, Howard Gest, 2014-06-28 Horizons of Bioenergetics provides information pertinent to the fundamental aspects of bioenergetics This book covers a variety of topics including oxidative phosphorylation energy conservation ATP formation metabolic regulation glycolysis and photosynthesis efficiency Organized into five sessions encompassing 23 chapters this book begins with an overview of the major landmarks in biochemical evolution that are most relevant to the discussion on bioenergetics This text then reviews the knowledge about ATP generation by substrate level phosphorylation by anaerobic bacteria that ferment organic compounds Other chapters consider the resolution and reconstitution of oxidative phosphorylation This book discusses as well another energy requiring

activity associated with electron transport in mitochondria that may take primacy over oxidative phosphorylation The final chapter deals with the possibility that conformational change can induce major shifts in electrochemical potential and provide a mechanism for energy storage and conversion This book is a valuable resource for biochemists scientists and research workers
