Different Ways to Subtract

Subtract Different Ways

Explain how the student found the difference.

1. This is how Bobby subtracted $66 - 8$:

Students should say that Bobby knew that $8 = 6 + 2$, so he made one hop of 6 back to 60, and then another hop of 2 to 58 to find that $66 - 8 = 58$.

2. This is how Gina subtracted $54 - 7$:

$$(40 + 14) - 7$$

$$40 + (14 - 7)$$

$$40 + 7 = 47$$

$$54 - 7 = 47$$

Students should say that Gina knew that 54 equals $40 + 14$. After breaking apart 54 into $40 + 14$, she subtracted 7 from 14 to get 7. Then she added $7 + 40$ to get 47. So $54 - 7 = 47$.

3. Lauren subtracted $94 - 5$ using a number line. Explain how she could have used the number line to find the answer.

Sample answer: She started at 94 and counted back 5 to 89.

Achievement Test Series KeyMath and many others *Mathematize It! [Grades K-2]* Kimberly Morrow-Leong, Sara Delano Moore, Linda M. Gojak, 2020-04-23 This book is a must have for anyone who has faced the challenge of teaching problem solving. The ideas to be learned are supported with a noticeably rich collection of classroom ready problems, examples of student thinking, and videos. Problem solving is at the center of learning and doing mathematics. And so Mathematize It should be at the center of every teacher's collection of instructional resources. John SanGiovanni, Coordinator Elementary Mathematics, Howard County Public School System, Ellicott City, MD. Help students reveal the math behind the words "I don't get what I'm supposed to do." This is a common refrain from students when asked to solve word problems. Solving problems is about more than computation. Students must understand the mathematics of a situation to know what computation will lead to an appropriate solution. Many students often pluck numbers from the problem and plug them into an equation using the first operation they can think of or the last one they practiced. Students also tend to choose an operation by solely relying on key words that they believe will help them arrive at an answer without careful consideration of what the problem is actually asking of them. *Mathematize It: Going Beyond Key Words to Make Sense of Word Problems, Grades K-2* shares a reasoning approach that helps students dig into the problem to uncover the underlying mathematics, deeply consider the problem's context, and employ strong operation sense to solve it. Through the process of mathematizing, the authors provide an explanation of a consistent method and specific instructional strategies to take the initial focus off specific numbers and computations and put it on the actions and relationships expressed in the problem. Sure to enhance teachers' own operation sense, this user-friendly resource for Grades K-2 offers a systematic mathematizing process for students to use when solving word problems. Gives practice opportunities and dozens of problems to leverage in the classroom. Provides specific examples of questions and explorations for addition and subtraction of whole numbers as well as early thinking for multiplication and division. Demonstrates the use of concrete manipulatives to model problems with dozens of short videos. Includes end of chapter activities and reflection questions. How can you help your students understand what is happening mathematically when solving word problems? Mathematize it! **Helping Children Learn Mathematics, 5th Australian Edition** Robert Reys, Mary Lindquist, Diana V. Lambdin, Nancy L. Smith, Anna Rogers, Leicha Bragg, Audrey Cooke, Melissa Fanshawe, Mark Gronow, 2025-10-10
