## **Grade 9 November Question Paper 2014 Natural Science:**

Drawing for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus), A process (how plants grow over time, what happens when chemicals combine), Conceptions of what science is and who does it, Images of identity development in science teaching and learning.

**Life and the Student** Charles Horton Cooley, 2015-01-31 *Life and the Student* 1927 with a new introduction by Jonathan B. Imber is a compilation of reflections, commentaries, and letters from other scholars that Charles Horton Cooley accumulated throughout his life. The book includes personal passages on various topics within the realms of reading and writing, thinking, art, science, sociology, academia, religion, and human nature. There is no formal structure to the book except the literary sense that organizes these thoughts and observations about life. It is impossible to categorize these widely ranging commentaries. They include discussions of the automobile, the impressionable nature of young people, the claim that the question of racial superiority is still unresolved, his belief that eugenicists are inconsistent in their views, and more. Cooley's work sought to emphasize the connection between society and the individual. He believed that the two could only be understood in relationship to each other. While researching the effects of social responses and social participation, he created the concept of the looking glass self, which is the theory that a person's sense of self grows out of interpersonal interactions and the perceptions of others. Cooley also showed that social life and the relationship between groups and communities stems from mental phenomena.
