Reach for Greatness Yong Zhao, 2018-01-09 Make education personalizable Every child can be great when they own their learning For years focusing on the achievement gap has led to the same result We hope for greatness and settle for competence But why settle It s time to

recognize that the potential for greatness lies in a unique form within each child and that the goal of education should be to encourage and develop it This inspiring manifesto brings in research from different disciplines to show where children s strengths and passions can be found and how personalizable education uncovers them Also included Strategies for implementing personalizable education Examples showing practices that have gone wrong and right Guidance for teaching disadvantaged students Every child has the potential to be great Teaching for greatness gives students control of their own learning and guides them toward future happiness and success Are you tired of gimmicks like personalized learning that have become empty slogans but keen for the real depth and substance of an education that helps all students to reach their full potential If so Yong Zhao s Reaching for Greatness is the book for you With vivid examples and carefully scaffolded argumentation Zhao shows how what he calls personalizable education offers an exciting and practical future for all of our students truly to become great Zhao s writing is full of whimsy and humor so that you can t wait to see what this wonderful alchemist of educational change is going to say next Best of all this gem of a book is one that not only all teachers but also a rising generation of students will cherish as well Dennis Shirley Professor Lynch School of Education Boston College Editor in Chief Journal of Educational Change Once again Yong pulls us from our narrow view of what education is and reminds us what it needs to be Personalized education as opposed to the ubiquitous and limited notion of personalized learning is essential for a time in which we need to recognize and cultivate the diverse strengths of our students for their own good and our shared future on earth Poignant stories from Yong s global travels to schools make the research in this call to action relatable and accessible for all educational stakeholders This is an important read Emily McCarren Academy Principal Punahou School co author of The Take Action Guides to World Class Learners book series *Global Perspectives on Educational Testing* Keena Arbuthnot,2017-11-01 This book provides a refined definition of standardized educational test fairness that can be utilized in multiple contexts to better understand the experiences and perspectives of diverse groups of test takers **School Climate** Peter M. The Meritocracy Trap Daniel Markovits,2020-09-08 A revolutionary new argument from eminent Yale Law professor
Daniel Markovits attacking the false promise of meritocracy It is an axiom of American life that advantage should be earned
through ability and effort Even as the country divides itself at every turn the meritocratic ideal that social and economic
rewards should follow achievement rather than breeding reigns supreme Both Democrats and Republicans insistently repeat
meritocratic notions Meritocracy cuts to the heart of who we are It sustains the American dream But what if both up and
down the social ladder meritocracy is a sham Today meritocracy has become exactly what it was conceived to resist a
mechanism for the concentration and dynastic transmission of wealth and privilege across generations Upward mobility has
become a fantasy and the embattled middle classes are now more likely to sink into the working poor than to rise into the
professional elite At the same time meritocracy now ensnares even those who manage to claw their way to the top requiring
rich adults to work with crushing intensity exploiting their expensive educations in order to extract a return All this is not the
result of deviations or retreats from meritocracy but rather stems directly from meritocracy s successes This is the radical
argument that Daniel Markovits prosecutes with rare force Markovits is well placed to expose the sham of meritocracy
Having spent his life at elite universities he knows from the inside the corrosive system we are trapped within Markovits also
knows that if we understand that meritocratic inequality produces near universal harm we can cure it When The Meritocracy
Trap reveals the inner workings of the meritocratic machine it also illuminates the first steps outward towards a new world
that might once again afford dignity and prosperity to the American people *Linguistic Influences on Mathematical
Cognition* Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude
representation largely independent of verbal linguistic representations has been viewed as the core numerical or
mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect

not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing **Psychological perspectives on expertise**

Guillermo Campitelli, Michael H Connors, Merim Bilalić, David Zachary Hambrick, 2015-05-19 Experts are persons who are very knowledgeable about or skillful in a particular area The aim of this Research Topic is to advance knowledge in the understanding of the phenomenon of expertise by putting together different lines of research that directly or indirectly study expertise Herbert Simon's expertise studies initiated two lines of research One is interested in elucidating the cognitive processes underlying expertise and the other investigates how expertise develops These lines of research started with studies comparing experts and novices in chess and then they extended to numerous areas of expertise such as music medical diagnosis sports arts and sciences In the field of judgment and decision making researchers investigate the quality of judgments and decisions of experts in different professions e.g. clinical psychologists medical practitioners judges meteorologists stock brokers Those lines of research explicitly investigate the topic of expertise but there are other research areas that make a substantial contribution to understanding expertise Scholars in language acquisition and in face perception for example investigate cognitive processes and development of expertise in areas in which almost everyone becomes an expert Furthermore skill acquisition research informs in detail about short term cognitive changes that may be important to understand how expertise develops We are interested in original research that advances knowledge in the understanding of decision making cognitive processes and development of expertise in sports intellectual games arts scientific disciplines and professions as well as expertise in cognitive abilities such as perception memory attention language and imagery We are also interested in theoretical articles in any of these areas articles that describe computational or mathematical models of expertise and articles offering a framework that would guide expertise research Articles that offer

integrative approaches of some of the areas described above are strongly encouraged The goal of this Research Topic is to produce a hallmark piece of work in the field of expertise which complements and does not overlap with the Neural implementations of expertise Research Topic in Frontiers in Human Neuroscience **The Theory of Objectification** Luis Radford, 2021-04-06 The Theory of Objectification A Vygotskian Perspective on Knowing and Becoming in Mathematics Teaching and Learning presents a new educational theory in which learning is considered a cultural historical collective process The theory moves away from current conceptions of learning that focus on the construction or acquisition of conceptual contents Its starting point is that schools do not produce only knowledge they produce subjectivities too As a result learning is conceptualised as a process that is about knowing and becoming Drawing on the work of Vygotsky and Freire the theory of objectification offers a perspective to transform classrooms into sites of communal life where students make the experience of an ethics of solidarity responsibility plurality and inclusivity It posits the goal of education in general and mathematics education in particular as a political societal historical and cultural endeavour aimed at the dialectical creation of reflexive and ethical subjects who critically position themselves in historically and culturally constituted mathematical discourses and practices and who ponder new possibilities of action and thinking The book is of special interest to educators in general and mathematics educators in particular as well as to graduate and undergraduate students

Handbook of the Sociology of Education in the 21st Century Barbara Schneider, 2018-10-10 This handbook unifies access and opportunity two key concepts of sociology of education throughout its 25 chapters It explores today's populations rarely noticed such as undocumented students first generation college students and LGBTQs and emphasizing the intersectionality of gender race ethnicity and social class Sociologists often center their work on the sources and consequences of inequality This handbook while reviewing many of these explanations takes a different approach concentrating instead on what needs to be accomplished to reduce inequality A special section is devoted to new methodological work for studying social systems including network analyses and school and teacher effects Additionally the book explores the changing landscape of higher education institutions their respective populations and how labor market opportunities are enhanced or impeded by differing postsecondary education pathways Written by leading sociologists and rising stars in the field each of the chapters is embedded in theory but contemporary and futuristic in its implications This Handbook serves as a blueprint for identifying new work for sociologists of education and other scholars and policymakers trying to understand many of the problems of inequality in education and what is needed to address them
