Abstract

The translation of English phrasal verbs (PVs) into French is a challenge, specially when the verb occurs apart from the particle. Our goal is to quantify how well current SMT paradigms can translate split PVs into French. We compare two in-house SMT systems, phrase-based and hierarchical, in translating a test set of PVs. Our analysis is based on a carefully designed evaluation protocol for assessing translation quality of a specific linguistic phenomenon. We find out that (a) current SMT technology can only translate 27% of PVs correctly, (b) in spite of their simplistic model, phrase-based systems outperform hierarchical systems and (c) when both systems translate the PV similarly, translation quality improves.

1 Introduction

For a long time, MT research has been struggling to deal with a certain number of unsolved problems, which reduce the usability and the utility of MT. One of these problems — a particularly hard

In the current dominant trend, *statistical machine translation* (SMT), transfer models are automatically learnt from sentence-aligned corpora. SMT paradigms have evolved from simple word-based models (Brown et al., 1993) to more sophisticated phrase-based models (Koehn et al., 2003) and hierarchical models (Chiang, 2007), where translation units are word sequences and trees instead of single words. Implicitly, these models capture some kinds of multiword expressions, like common noun compounds. However, due to their non-compositional semantics, unpredictable syntax, polysemous, productive and creative uses, many types of multiword expressions are not properly dealt with by state-of-the-art SMT systems.

English *phrasal verbs* (PVs) like *take off*, *give up* and *pull out* represent a particularly challenging class of multiword expressions for MT. The goal of this paper is to quantify how hard it is for current MT technology to translate these constructions. We focus on split PV occurrences because, as explained in Section 3, these constructions present a specific syntactic and semantic behaviour that makes them intuitively hard to model in current MT paradigms.
