International Conference for Innovation in Biomedical Engineering and Life Sciences Fatimah Ibrahim, Juliana Usman, Mas Sahidayana Mohktar, Mohd Yazed Ahmad, 2015-11-26 This volume presents the proceedings of ICIBEL 2015 organized by the Centre for Innovation in Medical Engineering CIME under Innovative Technology Research Cluster University of Malaya. It was held in Kuala Lumpur, Malaysia, from 6-8 December 2015. The ICIBEL 2015 conference promotes the latest researches and developments related to the integration of the Engineering technology in medical fields and life sciences. This includes the latest innovations, research trends and concerns, challenges and adopted solutions in the field of medical engineering and life sciences.

NICE at 25 Peter Littlejohns, Keith Syrett, 2024-08-30 Marking its 25th anniversary, this fascinating collection examines the pioneering work of the National Institute for Health and Care Excellence (NICE). Setting standards for the delivery of healthcare, issuing guidance on public health and assessing and making recommendations on health technologies, NICE has attracted widespread international attention, emulation and comment. The authors in this collection, drawn from a broad range of disciplinary backgrounds, offer analysis of key issues which have informed NICE's work, from the principles of health economics to patient engagement to the legal basis on which NICE operates. Covering many of the most important themes within contemporary debates on health policy and management today, this insightful collection will interest students and researchers as well as policy makers in the field.

Advanced Topics in Forensic DNA Typing: Interpretation John M. Butler, 2014-07-28 Advanced Topics in Forensic DNA Typing: Interpretation builds upon the previous two editions of John Butler's internationally acclaimed Forensic DNA Typing textbook, with forensic DNA analysts as its primary audience. Intended as a third edition companion to the Fundamentals of Forensic DNA Typing volume published in 2010 and Advanced Topics in Forensic DNA Typing: Methodology published in 2012, this book contains 16 chapters with 4 appendices providing up-to-date coverage of essential topics in this important field. Over 80% of the content of this book is new compared to previous editions. Provides forensic DNA analysts coverage of the crucial topic of DNA mixture interpretation and statistical analysis of DNA evidence. Worked mixture examples illustrate the impact of different statistical approaches for reporting results. Includes allele frequencies for 24 commonly used autosomal STR loci, the revised Quality Assurance Standards which went into effect September 2011.

The Future of Scientific Practice Marta Bertolaso, 2015-10-06 Focusing on cell dynamics, molecular medicine and robotics, contributors explore the interplay between biological, technological and theoretical ways of thinking. The collection makes a strong contribution to current debates in the philosophy of science and the changing role of scientific practice.

Environment: From Research to Application, 2017-11-06 People's desire to understand the environments in which they live is a natural one. People spend most of their time in spaces and structures designed, built, and managed by humans, and it is estimated that people in developed countries now spend 90 percent of their lives indoors. As people move from homes to workplaces, traveling in cars, and on transit systems, microorganisms are continually with and around them. The human-associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome. The characteristics of healthy indoor environments cannot yet be defined, nor do microbial clinical and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities, and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science, and human physiology. This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments, indoor microbiomes, and effects on human health and well-being. It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions.

Improving Animal Welfare through Genetic Selection Wendy Mercedes Rauw, 2016-07-12 In livestock species, breeding goals are aimed primarily at improvement of production traits. However, there are a number of examples where selection for high production efficiency has resulted in reduced welfare through unfavorable outcomes in health and fitness characteristics. These effects raise questions about what is ethically acceptable in animal breeding. Welfare problems may be experienced when physiological balance is disturbed by genetic selection for high production alone by a mismatch between the environmental challenges and the range of coping responses available to an animal, or from a mismatch between the animal's needs and their degree of satisfaction. This may be resolved by either improving the environment to support the animal, but also by providing the animal, through genetic selection, with means to adapt to the production environment. The Standing Committee of the European Convention for the Protection of Animals kept for Farming Purposes emphasizes that breeding goals should include health and welfare. The Farm Animal Welfare Council pleads for a greater emphasis in breeding programs on traits associated with good welfare. However, although breeding goals in most farm animal species have been broadened beyond production traits to include functional traits, behavioral traits are rarely included despite their potential to improve animal production and welfare. It is the goal of the present Research Topic to bring together experimental and theoretical research focusing on the genetics of welfare traits and the possibility to improve animal welfare through selection. This topic presents an overview of the

relationship between selection for high production and livestock robustness examples of improving robustness through the introduction of novel traits in livestock breeding and a discussion on selection methods to address welfare issues The discussion on sustainability of breeding practices is very alive today and will remain to be an important part of the debate in the future

Applied Data-Centric Social Sciences Aki-Hiro Sato,2014-07-29 Applied data centric social sciences aim to develop both methodology and practical applications of various fields of social sciences and businesses with rich data Specifically in the social sciences a vast amount of data on human activities may be useful for understanding collective human nature In this book the author introduces several mathematical techniques for handling a huge volume of data and analysing collective human behaviour The book is constructed from data oriented investigation with mathematical methods and expressions used for dealing with data for several specific problems The fundamental philosophy underlying the book is that both mathematical and physical concepts are determined by the purposes of data analysis This philosophy is shown throughout exemplar studies of several fields in socio economic systems From a data centric point of view the author proposes a concept that may change people s minds and cause them to start thinking from the basis of data Several goals underlie the chapters of the book The first is to describe mathematical and statistical methods for data analysis and toward that end the author delineates methods with actual data in each chapter The second is to find a cyber physical link between data and data generating mechanisms as data are always provided by some kind of data generating process in the real world The third goal is to provide an impetus for the concepts and methodology set forth in this book to be applied to socio economic systems
