QUESTION 3

- 3.1 Read the passage below and answer the questions that follow.

Peat lands are special wetlands that play a very important role in ecology. A peat land, of approximately 6 000 years old, near Mafikeng is almost destroyed because of excessive extraction of water from the nearby Molepo river. The water is extracted for human consumption.

Peat lands like the one near Mafikeng is exceptional and play an important role in storing water as well as preventing climate changes.

Dr Phil-Louis Grundling said that carbon that is 'held' or 'stored' by peat lands combats climate change because it decreases the amount of carbon in the atmosphere.

Peat lands trap about one third of the world's carbon. Approximately 50% of wetlands worldwide are peat lands. However in South Africa about 10% of the wetlands are peat lands.

Grundling explained that peat lands can hold about 1 000 times its own mass in water. This replenishes the water table and is the source that keeps streams flowing. The "sponge effect" of the peat also makes it possible to store water that is then released during dry seasons.

Dr Grundling said that it might be too late to restore the peat land near Mafikeng but it might be possible to restore some parts of it if more water is supplied to this peat land.

The result of this destruction is depletion of the water table. The habitat of numerous fish and frog species that lived in this peat land was also destroyed.

From: *Beeld*, 24 September 2016.

- 3.1.1 Give TWO other reasons (not mentioned in the passage) that can lead to the destruction of wetlands. (2)
- 3.1.2 Discuss reasons from the passage regarding the importance of these specific wetlands for the environment. (4)
- 3.1.3 Suggest a way in which this peat land near Mafikeng can be restored. (2)

Innovative Approaches in Early Childhood Mathematics Oliver Thiel, Bob Perry, 2020-07-29 The chapters in this book investigate and reflect on many of the issues and challenges raised by the current trends and tensions in early childhood mathematics education. They emanate from seven countries: Australia, Northern Ireland, Norway, Portugal, Spain, Sweden, and Switzerland. Ever since Piaget invented the kindergarten, mathematics has been a part of early childhood pedagogy. Mathematics is an important part of children's daily life which helps them to understand the world around them. Nowadays, early childhood mathematics is in the international spotlight. Partly, this is the result of myriad studies that seem to show that early childhood mathematics achievement is a strong predictor of success or otherwise in future school mathematics, other school subjects, and life itself. Another influence on early childhood mathematics education is the advent of the political and advocacy juggernaut known as STEM: Science, Technology, Engineering, and Mathematics. Early childhood mathematics education is important for children's present and future learning. This book provides a strong collection of current research for the consideration of all in the early childhood education field. It was originally published as a special issue of the *European Early Childhood Education Research Journal*.
