Advanced Research Methodology: Methods And Techniques Dr. S. Parvathy, Dr. M. Umayavalli, Dr. P. Ramu, Mrs. V. Manjula, 2023-07-28 The researcher's inner world is formed by his or her choice of research methodology which considers the nature of the study and the researcher's philosophy, time frame and other contextual factors. Furthermore, the research methodology works as the central nervous system since it limits the scope of the investigation and because proper research work necessitates that both the internal and exterior surroundings adhere to the correct research methodology procedure. Research methodologies refer to the procedures used to assemble information for studies. The data might be used for theoretical or applied studies such as the strategic conceptualization of management research, operational planning, methodologies and change management. Most of your work will be done when you complete the data analysis. However, before you start, you need to consider specific crucial issues in research technique such as the validity of research data, ethics and dependability. After this comes the research plan which might be either purely experimental or include some elements of experimentation. The last two steps are analyzing the data and producing the research report. The data is meticulously sorted into graphs, tables and only the most relevant information is presented. A researcher must develop a research approach appropriate to the study's subject matter. It is essential to remember that even if two topics need the same study approach, the research technique might differ.

Food Adulteration and Role of Hygiene Dr. S. Parvathy, Dr. M. Umayavalli, Dr. J. Dharmaraja, Mrs. V. Manjula, 2023-06-26 The purpose of this book is to put out the knowledge of understanding and to identify a few common culinary adulterants. Food is essential for life's sustenance and nourishment. Food adulteration defrauds the consumer and can pose grave health risks in certain instances. In accordance with the provisions of the Prevention of Food Adulteration Act of 1954 and the rules promulgated thereunder, food adulteration is a punishable offence. Hygiene is a concept associated with medicine as well as personal and professional care practices related to most aspects of daily life, although it is most commonly associated with sanitation and preventative measures. Personal hygiene can prevent food-borne illness. Food poisoning, causing bacteria, can be found on everyone, including healthy individuals. Due to the significance of food, contemporary society views food adulteration as a grievous and unforgivable socioeconomic transgression. In fact, The Adulteration of Food Stuffs and Other Food is a concurrent list item in the Indian Constitution. In order to prevent this food adulteration, the Indian government has enacted The Prevention of Food Adulteration Act 1954 as a piece of consumer legislation.
