## **Mustang Designer Edgar Schmued And The P 51:**

Mustang Designer Ray Wagner, 2000-04-17 Mustang Designer tells the story of American wartime fighter development including engines and armaments as part of a nationwide program of aircraft builders and fliers focusing on Edgar Schmued the designer of the Mustang The P 51 Mustang is widely regarded as the best propeller driven fighter that ever flew What many might not realize is that the plane's developer was a German migrant This book tells of how Schmued created a weapon that would ultimately prove lethal to the aspirations of those who had seized control over his native land

**Mustang Designer** Ray Wagner, 1990 A short list of the most innovative and successful airplanes in the history of aviation would have to include the P 51 Mustang Mustang Designer is the story of Edgar Schmued and his role in developing the remarkable flying machine that played a major role in turning the tide of WWII Black and white photographs Spitfire, Mustang and the 'Meredith Effect' Peter Spring, 2024-04-04 Examines the life of the remarkable and controversial F W Meredith an individual who has largely been forgotten by history despite the brilliant advances he made which helped the Allies win the war against Hitler's Third Reich By the mid 1930s the obstacles to high speed that aircraft designers faced included the question of cooling the engine This was a big challenge that those working on the new fast aeroplanes entering service as the war clouds gathered over Europe had to consider as the drag from the system increased as a square of the speed Ducted systems were designed which lowered drag but these were based on the assumption that the system was cold This ignored the potential energy from the air heated by the radiator for liquid cooled aircraft and from the discharged engine exhaust gases It took a profoundly lateral thinker to harness the possibilities of the paradox that heat could cut the cost of cooling That thinker was the British engineer Frederick William Meredith A researcher at the Royal Aircraft Establishment at Farnborough until 1938 F W Meredith a key player in the UK's development of the autopilot and remote controlled aircraft His contribution to Allied success in the Second World War was enormous but incredibly he was also a known Soviet agent Few would doubt that the Supermarine Spitfire was a pioneering aeroplane not because it was an all metal monoplane with retractable undercarriage and enclosed cockpit as these were not unique but because it was the first to incorporate a Meredith designed ducted cooling system This was intended from the beginning to use heat to create negative drag In practice the Spitfire's design was flawed as Meredith himself pointed out and did not fully use what became known as the Meredith Effect Meredith also made entirely overlooked but extremely important contributions to resolving the problem of how to induce air smoothly into cooling ducts at high speeds without which as the Spitfire demonstrated ducted cooling systems worked sub optimally The first aeroplane properly to exploit the Meredith Effect was the North American P 51 Mustang this being a very significant factor as to why it was 30mph faster than the Spitfire when both had the same Rolls Royce Merlin engine This book by Peter Spring examines the life of the remarkable and controversial F W Meredith an individual who has largely been forgotten by history despite the brilliant advances he made advances which helped the Allies

win the war against Hitler's Third Reich      **P-51B Mustang** James William "Bill" Marshall, Lowell F. Ford, 2020-07-09 The story of the P 51B Mustang aircraft from its development prior to the American entry into the war through to D Day in June 1944 During World War II the United States Army Air Corps was led by a cadre of officers who believed implicitly that military aviation particularly fast heavy bombers at high altitude would be able to destroy strategic enemy targets during daylight with minimal losses However by 1942 the Flying Fortress was proving vulnerable to Luftwaffe fighters This title charts the United States Army Air Force's struggle to develop a Long Range Escort which would enable them to achieve the Combined Bomber Objectives and gain mastery of the skies over the Third Reich The commitment of the USAAF to the Mediterranean and European theatres saw an increasingly desperate need to find a fighter escort which reached crisis point in 1943 as losses suffered in the Tidal Wave offensive and Schweinfurt Regensburg Munster raids emphasised the mounting strength of the Luftwaffe The USAAF leaders increasingly accepted the probability of bomber losses and the deployment of the P 51B Mustang solved the problem of Germany's layered defence strategy as Luftwaffe fighters had been avoiding the P 47 Thunderbolt and P 38 Lightning escort fighters by concentrating their attacks beyond the range of the Thunderbolt and Lightning The P 51B duly emerged as the The Bastard Stepchild that the USAAF Material Division did not want becoming the key Long Range Escort fighter alongside the P 38 and P 47 that defeated the Luftwaffe prior to D Day As well as the P 51B's history this title explores the technical improvements made to each of these fighters as well as the operational leadership and technical development of the Luftwaffe they fought against      *Masters of the Air* MTI Donald L.
