

Protein Synthesis: Making new proteins (the hormones and enzymes) for the body. Protein synthesis occurs in two steps and in two areas of the cell. This happens because DNA cannot leave the nucleus of the cell.

Transcription: (writing mRNA = the message of how to make proteins); occurs in nucleus of cell

1. Part of DNA unwinds and creates mRNA (one template) in the nucleus with the help of RNA polymerase.
2. When transcribing from DNA to RNA, Thymine is replaced by Uracil.
3. Only one side of the DNA is transcribed into mRNA.
4. mRNA leaves the nucleus and travels to the ribosome in the cytoplasm.

Translation: (translating for an amino acid); occurs using ribosome floating in the cytoplasm of cells

5. With the help of the ribosome, mRNA is translated.
6. tRNA transfers the complementary anticodon with the amino acid attached to each codon on mRNA.
7. Polypeptide chain is created where each amino acid is joined by a peptide bond = protein.
8. Protein either stays in the cell or gets packaged.

Quick Practice

DNA Sequence: T A C - C A A - T G T - C A G - A T A - A T C - T A C - G A T - A A A - T G A - A T C

mRNA codons: _____

tRNA anticodons: _____

Amino Acid Sequence = Protein (use mRNA codon and the chart below to find the amino acid)

The Genetic Code

READ the mRNA codon, NOT the tRNA anticodon, to find the amino acid!
 Note how UAC (codon) = Tyr (amino acid) and ACA (codon) = Ser (amino acid)

Cyber Resilience: Applied Perspectives Igor Linkov, Alexander Kott, 2025-07-16 Resilience is defined as the ability to recover from or easily adapt to shocks and stresses Resilience unlike the concept of security which is often and incorrectly conflated with resilience refers to the system's ability to recover or regenerate its performance after an unexpected impact produces a degradation in its performance A clear understanding of distinction between security risk and resilience is important for developing appropriate management of cyber threats This book draws expertise from academia industry and government to present insightful discussion of the fundamental concepts of cyber resilience including the most current technical issues relevant methods and procedures and recent developments of the field This book offers greater emphasis on applying the concepts and methods of cyber resilience to practical problems as compared to our previous book The bulk of the material is presented in a logical consistent and continuous way that is easily accessible to non specialists and will be of use as teaching material as well as source of emerging scholarship in the field

From Sequences to Graphs Annie Chateau, Mikaël Salson, 2022-09-08 In order to study living organisms scientists not only study them at an overall macroscopic scale but also on a more detailed microscopic scale This observation pushed to its limits consists of investigating the very center of each cell where we find the molecules that determine the way it functions DNA deoxyribonucleic acid and RNA ribonucleic acid In an organism DNA carries the genetic information which is called the genome It is represented as four letter sequences using the letters A C G and T based on these sequences computer methods

described in this book can answer fundamental questions in bioinformatics This book explores how to quickly find sequences of a few hundred nucleotides within a genome that may be made up of several billion how to compare those sequences and how to reconstruct the complete sequence of a genome It also discusses the problems of identifying bacteria in a given environment and predicting the structure of RNA based on its sequence
