My Article On Lung Cancer And Brain Cancer:

Real-World Data and Real-World Evidence in Lung Cancer Valerio Gristina ,Chukwuka Eze,2024-06-14 Lung cancer is still one of the most common malignancies with a high global mortality rate with over 2 million cases confirmed by the World Health Organization in 2018 Although there has been progress in diagnosing and treating lung cancer patients still have poor prognosis with a 5 year survival rate typically from 4 17% which is dependent on the stage of the cancer and regional differences The majority of lung cancer patients are at the advanced stages of the disease at the time of their diagnosis and therefore have less chances of early treatment that could have improved their survival rate Therefore early detection of lung cancer remains imperative to improve the prognosis Treatment for Non Small Cell Lung Cancer in Distinct Patient Populations Junji Uchino,Torsten Goldmann,Hideharu Kimura,2022-02-24 Therapeutic Strategies in EGFR Mutant Lung Cancer Yaxiong Zhang,Tomoya Kawaguchi,Wenhua Liang,Yunpeng Yang,2022-11-03 **Journal of the National Cancer Institute** ,1999 **Central Nervous System Metastases in Lung Cancer Patients: From Prevention to Diagnosis and Treatment** Lizza E.L Hendriks,Deepa S. Subramaniam,Anne-Marie C. Dingemans,2019-01-21 Approximately 40% of lung cancer patients will develop central nervous system CNS metastases during the course of their disease Most of these are brain metastases but up to 10% will develop leptomeningeal metastases Known risk factors for CNS metastases development are small cell lung cancer SCLC adenocarcinoma histology epidermal growth factor receptor EGFR mutant or anaplastic lymphoma kinase ALK rearranged lung cancer advanced nodal status tumor stage and younger age CNS metastases can have a negative impact on quality of life QoL and overall survival OS The proportion of lung cancer patients diagnosed with CNS metastases has increased over the years due to increased use of brain imaging as part of initial cancer staging advances in imaging techniques and better systemic disease control Post contrast gadolinium enhanced magnetic resonance imaging gd MRI is preferred however when this is contra indicated a contrast enhanced computed tomography CE CT is mentioned as an alternative option When CNS metastases are diagnosed local treatment options consist of radiotherapy stereotactic or whole brain and surgery Local treatment can be complicated by symptomatic radiation necrosis for which no high level evidence based treatment exists Moreover differential diagnosis with metastasis progression is difficult Systemic treatment options have expanded over the last years Until recently chemotherapy was the only treatment option with a poor penetration in the CNS Angiogenesis inhibitors are promising in the treatment of primary CNS tumors as well as radiation necrosis but clinical trials of anti angiogenic agents in NSCLC have largely excluded patients with CNS metastases Furthermore research has also focused on methods to prevent development of CNS disease for example with prophylactic cranial irradiation Recently checkpoint inhibitors have become available for NSCLC patients and tyrosine kinase inhibitors TKIs have improved prognosis significantly in those with a druggable driver mutation Newer TKIs are often designed to have better CNS penetration compared to first generation TKIs Despite advances in treatment options CNS metastases remain a

problem in lung cancer and cause morbidity and mortality This Research Topic provides an extensive resource of articles describing advances in CNS metastases management in lung cancer patients from prevention to diagnosis and treatment

Hope for Cancer Patients at All Stages of illness Radhakrishna Vemuri, M.D.,2022-04-01 Throughout his decades as a practicing oncologist Dr Radha Vemuri treated patients with all types of cancer at all stages of illness He learned that every patient needs more than just state of the art medicine whether at the beginning or final stages of cancer and at every point in between All patients need hope From hope comes the fortitude to fight for life and the peace to face whatever the future brings whether it be balancing treatment with other activities or end of life concerns Cancer patients often find themselves overwhelmed and this book shows how hope can be maintained throughout cancer treatment from diagnosis through whatever the end result may be After receiving his own advanced cancer diagnosis Radha personally tested the effectiveness of his longstanding philosophy and is now able to express the necessity of hope from both a patient s and physician s points of view

Varlotta, Giulia Veronesi,2018-08-30 This special edition of Frontiers in Oncology reviews the current efficacy and limitations of surgical and radiotherapeutic management of lung cancer and provides insight into how local management options may change in the future

The Effect of Anti-Cancer Drug Therapies in the Treatment of Lung Cancer Pasquale Pisapia, Cyril Corbet, Zhi Li,2022-11-24 **Stripped** Heather King,2015-08-11 Cancer that unfair indiscriminate devastating disease affects everyone at some point whether a family member a friend or ourselves It is a life altering event of seismic proportions that forever impacts the landscape of our lives and with raw force pushes us to reorder priorities reassess values and perhaps rethink our faith A diagnosed tumor forced Heather King to this crisis of mortality to live at the crossroads of uncertainty belief fear culture and modern medicine Only her faith in Christ the Great Physician helped her sort through the crippling uncertainty and choose her best way forward Stripped is a heartfelt expression of profound Catholic faith in the face of a cancer diagnosis It chronicles King s informed decision not to blindly declare war on her cancer but to carefully examine all the medical evidence available and to choose to bring God into her decision making even if that meant going against established medical advice The story of Stripped demonstrates how King s medical and spiritual journey led her to a place of freedom in Christ where she could make an informed and faith filled decision about her course of treatment and ultimately accept her vulnerability King learned as we all must that healing means so much more than simply getting well

Genetic and Epigenetic Control on Immune Responses Regulating Molecules in Cancer Development, Progression, and Treatment Katherine Chiappinelli, Alejandro Villagra, Lidia Karabon, 2024-10-16

In line with recent evidence the development of cancer has been described as uncontrolled cell growth that results from gradual accumulation of genetic and epigenetic alterations involving aberrations in oncogenes tumor suppressor genes and defects in genes engaged in DNA repair As a result cancer cells acquire a neoplastic phenotype and tumor associated antigens TAAs are presented on their surface These target structures should be recognized by cells of the immune system However a sequence of events at the genetic and epigenetic level disturb immune cells and in consequence make them unable to eliminate cancer cells Both innate and adaptive immunity are mobilized against cancer cells In response to the appearance of cells with malignant transformation NK cells release perforin and granzyme causing direct cytotoxicity of the target cells They can also secrete pro inflammatory cytokines and in that way enhance the anticancer response The activity of NK cells is regulated by a variety of activating and inhibitory receptors including NKG2D KIR CD94 NKG2 heterodimers and natural cytotoxicity receptors TNF family ligands as well as co stimulatory receptors which recognize related molecules on target cells A fundamental trigger of the anticancer immune response is the recognition of TAAs by T cells via the major histocompatibility complex MHC which should be followed by signals from co stimulatory molecules Full activation of T lymphocytes requires a third signal provided by the presence of cytokines and this leads to cell

proliferation differentiation and secretion of chemokines and cytokines The effect is to drive the clonal expansion of the T cells directed against TAAs and to recruit other immune effector cells in order to enhance immune defense
