The Handbook of Research on Environmental Education Strategies for Addressing Climate Change and Sustainability produces innovative approaches, methods and ideas in education for climate change, environment strategies and sustainability along with the development of curriculum and strategies for sustainable development goals. The chapters encompass multiple disciplines such as geology, geography, remote sensing, geographic information systems, environmental science and environmental engineering. Yet while the field of international comparative studies has grown, there has not been an extensive study on the relationship between educational practices, students and how practitioners are prepared and trained. This handbook explores international educational practices and behaviours through new research and a review of existing research with chapters spread across six parts: Part I Introduction to Research Practices in Comparative Studies of Education; Part II Research Methods; Part III Policy Transfer Research through International Comparisons; Part IV Use of Student time in Formal and Informal Settings; Part V School Practices from Early Childhood through Secondary School; Part VI Conclusion.
