Core Practices for Project-Based Learning Pam Grossman, Zachary Herrmann, Sarah Schneider Kavanagh, Christopher G. Pupik Dean, 2022-10-18 Core Practices for Project Based Learning offers a framework and essential set of strategies for successfully implementing project based learning PBL in the classroom Centering on teaching practice this work moves beyond project planning to focus on the complex instructional demands of the student centered PBL approach Pam Grossman and her colleagues draw on their research with teachers educational leaders and curriculum designers to identify the instructional goals practices and mindsets that enable educators to effectively facilitate deep learning in PBL environments The authors first define the four primary teaching goals of the PBL model supporting subject area learning engaging students in authentic work encouraging student collaboration and agency and building an

iterative culture where students are always prototyping reflecting and trying again Grossman and her coauthors then equip educators with ten key practices that serve these goals These practices include methods to elicit higher order thinking to engage students in disciplinary and interdisciplinary practice and mentor student decision making The authors guide educators from a clear starting place through a series of concrete manageable steps that apply whether they are initiating PBL or working to improve existing PBL implementation Extended case studies illustrate the use of the core practices in real world situations Core Practices for Project Based Learning is an invaluable resource to help educators realize their instructional vision and create meaningful student experiences

Competence Assessment in Education Detlev Leutner, Jens Fleischer, Juliane Grünkorn, Eckhard Klieme, 2017-03-27 This book addresses challenges in the theoretically and empirically adequate assessment of competencies in educational settings It presents the scientific projects of the priority program Competence Models for Assessing Individual Learning Outcomes and Evaluating Educational Processes which focused on competence assessment across disciplines in Germany The six year program coordinated 30 research projects involving experts from the fields of psychology educational science and subject specific didactics The main reference point for all projects is the concept of competencies which are defined as context specific cognitive dispositions that are acquired and needed to successfully cope with certain situations or tasks in specific domains Koeppen et al 2008 p 62 The projects investigate different aspects of competence assessment The primary focus lies on the development of cognitive models of competencies complemented by the construction of psychometric models based on these theoretical models In turn the psychometric models constitute the basis for the construction of instruments for effectively measuring competencies The assessment of competencies plays a key role in optimizing educational processes and improving the effectiveness of educational systems This book contributes to this challenging endeavor by meeting the need for more integrative interdisciplinary research on the structure levels and development of competencies

education Focuses on mathematical education for developing early mathematics courses **Engaging in Mathematics in the Classroom** Alf Coles, 2015-07-30 What comes first class management or student engagement How can the real world be used to engage learners What is the role of technology in engaging students And is understanding or exam success more engaging In the modern world success in school mathematics can determine life chances It is therefore vital to engage children and young people in learning mathematics Engaging in Mathematics in the Classroom brings together the debates concerning mathematical engagement and draws on first hand experience and key research to promote successful classroom practice It considers what engagement looks like at different ages and the implications of this for the classroom Accessibly written with examples of successful classroom practice activities and projects the book covers Planning and managing engagement in learning Mathematical understandings and meanings Early Primary and the number system Primary Secondary Transition and geometrical thinking Secondary school Adolescence and algebraic activity Post 16 and infinity Learning across the lifespan Written by a leading authority in the field this timely text will be essential reading for all trainee and practising teachers of mathematics Drawing for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning The authors are working in schools universities and continual science learning CSL settings around the world They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking sometimes direct observation and in other instances their memories The result is a collection of research and essays that offer theory techniques outcomes and models for the reader Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms Secondary students describe their ideas of chemistry and physics Teacher educators use drawings to consider the progress of their undergraduates understanding of science teaching and even their moral ethical responses to teaching about climate change Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted A physician explains how the history of drawing has been a critical tool to medical education and doctor patient communications Each chapter contains samples insights and where applicable analysis techniques The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum The sections are divided by the kinds of activities for which drawing has historically been used in science education An instance of observation Audubon Linnaeus A process how plants grow over time what happens when chemicals combine Conceptions of what science is and who does it Images of identity development in science teaching and learning **Psychology and Mathematics Education** Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves

problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
