North to Alaska John Thompson,2020-07-16 Every year the Race to Alaska challenges the skill and daring of many adventurers as they transit 750 miles of the Inside Passage from Port Townsend WA to Ketchikan AK Along the way they face gales dangerous currents orcas and even grizzly bears as they race north No motors or outside assistance is allowed All boats must be manually propelled along with the use of any sails No other rules 10 000 to the winner and a set of steak knives to the runner up The race begins long before the starting gun goes off Gerald wants to sail the smallest boat ever to finish the race which requires a custom built boat A medical emergency throws the whole project into jeopardy but his dutiful son Bobby steps up at the last minute to build the boat for him Of course nothing goes as planned as time is short and an unexpected romance threatens to derail his schedule Eventually they succeed and get the boat to the starting line and that s where the real adventure begins A race within the race develops to see who the first solo finisher would be Six teams chip in 200 each the winner takes it all

Vehicular Engine Design Kevin Hoag,2007-02-05 The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines The majority of these courses today emphasize the application of thermodynamics to engine efficiency performance combustion and emissions There are several very good textbooks that support education in these aspects of engine development However in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development In doing so it becomes quickly apparent that no suitable text book exists in support of such courses This book was written in the hopes of beginning to address the need for an engineering based introductory text in engine design and mechanical development It is of necessity an overview Its focus is limited to reciprocating piston internal combustion engines both diesel and spark ignition engines Emphasis is specifically on automobile engines although much of the discussion applies to

larger and smaller engines as well A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry It is intended to provide basic information and most of the chapters include recent references to guide more in depth study **Contractors & Engineers Magazine** ,1969
