Commerce Business Daily, 1998-03 *Security*, 2002 **CQ**, 2002 **Programming Amateur Radios with Chirp**
Brian Schell, 2018-06-04 Back in my day radios came with a CW key and a frequency knob and that was all we needed Every Old Ham Curmudgeon OK that s probably a slight exaggeration but radios were a lot simpler in the distant past when everything was station to station and most communications were some flavor of HF Nowadays we have HF VHF UHF digital modes CW SSB AM FM MW repeaters with offsets repeaters with tones User IDs reflectors talk groups and who knows what coming down the road for next year There are a lot of modes tones offsets and little nit picky details that have to go into our radios before we can even make a call On the other hand radios especially handheld models continue to get smaller lighter and generally have fewer physical buttons and controls This is good in that it keeps costs down adds to durability and allows for waterproofing but it doesn t make programming them any easier Fortunately we have computers to handle all the programming stuff for us Just hook the radio up to the computer enter in all your information transfer the frequency and channel data into the radio and you re good to go Sounds simple doesn t it The problem is that radio manufacturers aren t necessarily good software designers God forbid you try to program a radio on an Apple or Linux computer using manufacturer s software None of the companies that make radios include software for these two very common operating systems None Even Windows users aren t in the clear What happens when you try to use the software that came with your radio when the radio was sold in 2007 and the software was made for Windows XP Or maybe your radio came with a state of the art serial port connector That was great back when all computers had serial ports now those are hard to find options or require an adaptor And even though many ham operators enjoy tinkering with computers there are many who still haven t embraced computers These things just aren t that simple Fortunately there is CHIRP a free multi platform software that works with a large number of common amateur radios CHIRP even has database tools for setting up local repeaters National Calling frequencies MURS FRS GMRS and Marine frequencies you may not even need to look anything up If you re already comfortable with using programming software from RT Systems or have no trouble working with whatever software that came with your radio than maybe this book isn t for you If you aren t good with computers or you re having trouble with the basic process don t know what all those columns mean or are otherwise pulling your hair out trying to get your radio programmed then this book is for you We ll walk through getting the software installed and set up connecting your radio with an appropriate cable and communications port reading template data from the radio editing that data and writing that data back out to the radio [Radio Programming: Tactics and Strategy](#) Eric Norberg, 1996-05-07 A practical handbook for programming directors this guide focuses on achieving specific objectives in today s modern competitive environment Radio Programming is designed to convey underlying principles and to assist the programmer in accomplishing specific objectives without mandating exact implementation methods Instead it empowers station management and the PD to implement

This Business of Radio Programming Claude Hall,Barbara Hall,2000-09-01 **Two-Way Radio Programming Basics** Martin Blochberger,2015-09-27 This book Two way radio programming basics focus on software based programming of analog voice two way radios The book is radio model agnostic and gives you a broad overview on how to program your radio Usually after purchasing a two way radio the number one question most people ask Now how do I program this thing This is the question this book answer It is an easy guide for the first steps in basic two way radio programming This book is for anyone who touches a two way radio daily at their job or

during events or at their Amateur radio club CERT group or while on an emergency disaster preparation exercise or out hunting and always wanted to know how to program their own radio For instance add a new channel or edit a channel already programmed into the radio Why does this book only focus on software based two way radio programming Since there are many different types of two way radio models out there with their own particular way of programming the specific radio this book will exclusively focus on software based programming Because there is no way this book can cover every single radio model and the way to program them On the other hand the radio programming software packages are very similar in structure Besides in most cases it is anyway a lot faster and easier to program the radio with the computer software than mess with the radio menu structure to program it

Getting Started with CHIRP Radio Programming Allan Hall, 2021-01-02 Amateur or ham radios have become increasingly capable over the years adding features that once were not even dreamed of This is especially true of handheld radios that can now easily reach the other side of the world with ease using newer digital protocols Unfortunately this has led to the radios being increasingly hard to program What used to take a couple of minutes to set the frequency offset and tone for a couple of local repeaters has turned into something that can take hours of frustration to get anywhere Today the vast majority of popular handheld radios can be programmed using the open source and freely available software called CHIRP This too has a downside it has no documentation to speak of While CHIRP is fairly straight forward and easy to use once you know what you are doing it can be daunting for the new radio operator who doesn't understand the terms or even the basics of radio communications That's where Getting Started with CHIRP Radio Programming comes in guiding you from start to finish to getting your radio up and running fast and easy Whether you are running Windows MacOS or even Linux this guide walks you through the installation of the software and then covers every menu option in the software You are introduced to a programming cable used to connect your computer to your radio and even shown step by step how to make your own While cables may vary from radio to radio the idea will remain the same making sure you can create a custom cable for any radio you choose After that you go on a tour of every programming option available using the most popular handheld radio today the Baofeng UV 5R as an example radio Comparisons in sections to other radios with more complex features makes sure you know what you might run into regardless of which radio you might want to program Then the book rounds out your education with a section on getting help when things don't work as they should and a nice glossary of terms for amateur radio So what are you waiting for Grab your copy and become a CHIRP radio programming guru TODAY
