Teaching Green -- The Elementary Years Tim Grant,Gail Littlejohn,2005-05-01 A complete resource for teaching green to young people from kindergarten through grade five *Flammable Australia* Richard J Williams,A Malcolm Gill,Ross A Bradstock,2012-02-21 In *Flammable Australia* Fire Regimes Biodiversity and Ecosystems in a Changing World leading researchers in fire ecology and management discuss how fire regimes have shaped and will continue to shape the distribution and abundance of Australia s highly diverse plants and animals Central to this is the exploration of the concept of the fire regime the cumulative pattern of fires and their individual characteristics fire type frequency intensity season and how variation in regime components affects landscapes and their constituent biota Contributions by 44 authors explore a wide range of topics including classical themes such as pre history and evolution fire behaviour fire regimes in key biomes plant and animal life cycles remote sensing and modelling of fire regimes and emerging issues such as climate change and fire regimes carbon dynamics and opportunities for managing fire regimes for multiple benefits In the face of significant global change the conservation of our native species and ecosystems requires an understanding of the processes at play when fires and landscapes interact This book provides a comprehensive treatment of this complex science in the context of one of the world s most flammable continents , **The Making of Human Concepts** Denis Mareschal,Paul C. Quinn,S. E. G. Lea,2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but

masked by their inability to verbalise abstractions Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences 10

Performance-Based STEM Projects for Grades 6-8 Todd Stanley, 2021-09-03 10 Performance Based STEM Projects for Grades 6 8 provides 10 ready made projects designed to help students achieve higher levels of thinking and develop 21st century skills while learning about science technology engineering and math Projects are aligned to national standards and feature crosscurricular connections allowing students to explore and be creative as well as gain an enduring understanding Each project is linked to national STEM education goals and represents one of a variety of performance assessments including oral presentations research papers and exhibitions Included for each project are a suggested calendar to allow teachers to easily plan a schedule mini lessons that allow students to build capacity and gain an understanding of what they are doing as well as multiple rubrics that can be used to objectively assess the performance of students The lessons are laid out in an easy to follow format that will allow teachers to implement the projects immediately Grades 6 8 **Handbook of Erosion**

Modelling R. P. C. Morgan, Mark Nearing, 2016-04-13 The movement of sediment and associated pollutants over the landscape and into water bodies is of increasing concern with respect to pollution control prevention of muddy floods and environmental protection In addition the loss of soil on site has implications for declining agricultural productivity loss of biodiversity and decreased amenity and landscape value The fate of sediment and the conservation of soil are important issues for land managers and decision makers In developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape A study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years These processes operate on scales of millimetres for single raindrops to mega metres for continents Erosion modelling thus covers quite a lot of ground This book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales The aim is to provide land managers and

others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models Problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments The book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models

Engineering in Pre-college Settings Şenay Purzer,Johannes Strobel,Monica E. Cardella,2014 In science technology engineering and mathematics STEM education in pre college engineering is not the silent e anymore There is an accelerated interest in teaching engineering in all grade levels Structured engineering programs are emerging in schools as well as in out of school settings Over the last ten years the number of states in the US including engineering in their K 12 standards has tripled and this trend will continue to grow with the adoption of the Next Generation Science Standards The interest in pre college engineering education stems from three different motivations First from a workforce pipeline or pathway perspective researchers and practitioners are interested in understanding precursors influential and motivational factors and the progression of engineering thinking Second from a general societal perspective technological literacy and understanding of the role of engineering and technology is becoming increasingly important for the general populace and it is more imperative to foster this understanding from a younger age Third from a STEM integration and education perspective engineering processes are used as a context to teach science and math concepts This book addresses each of these motivations and the diverse means used to engage with them Designed to be a source of background and inspiration for researchers and practitioners alike this volume includes contributions on policy synthesis studies and research studies to catalyze and inform current efforts to improve pre college engineering education The book explores teacher learning and practices as well as how student learning occurs in both formal settings such as classrooms and informal settings such as homes and museums This volume also includes chapters on assessing design and creativity

ScienceBites Gerard Jagers op Akkerhuis,2023-09-14

In science concepts such as organism evolution and life are used almost every day Every scientist knows the general meaning of such concepts At the same time nature is complex and for this reason it is difficult to draw stringent lines around classes of things Scientists therefore accept the use of so called working definitions for many concepts It is frequently advocated that working on definitions has little use for practical research This book explores a different viewpoint in which definitions are compared with tools If your toolbox contains too few tools tools that are worn down or tools that don t fit it becomes difficult to carry out even the most easy maintenance or repair job Experts know suitable tools make the work easier The aim of this book is to examine much used concepts in science as if these are tools in a scientific toolbox Do the current definitions represent quality tools To explore this question this book uses a recently developed hierarchy theory the operator theory as a

reference This theory is explained in the first chapter Whenever the analyses suggest to do so the ScienceBites offer directions for improvement of current definitions These delicious bites of science will inspire readers to devour much more scientific knowledge and to reflect on the importance for humanity of progress in the sciences Prof Dr Herman Philipse Utrecht University In this golden age of biology SCIENCEBITES provides a much needed critical reflection on its core terms Prof Dr Bart Gremmen Wageningen University Research This is one of the most fascinating books I have read recently Do not be deceived by the brevity of the chapters Each gave me food for thought during many days Dr Peter Roessingh University of Amsterdam Tropical Rainforest Research — Current Issues D.S.
