Life Sciences Paper 1 November 2014:

How America Stacks Up Edward Alden, Rebecca Strauss, 2016-02-01 American leadership in the world is built on the foundation of its economic strength Yet the United States faces enormous economic competition abroad and threats to its economy at home In *How America Stacks Up* Economic Competitiveness and U S Policy Edward Alden Bernard L Schwartz senior fellow at the Council on Foreign Relations and director of the Renewing America initiative and Rebecca Strauss associate director of Renewing America focus on those areas of economic policy that are the most important for reinforcing America s competitive strengths Covering education transportation trade and investment corporate tax worker retraining regulation debt and deficits and innovation *How America Stacks Up* shows how in a highly competitive global economy these seemingly domestic issues are all crucial to U S success in the global economy The line between domestic economic policy and foreign economic policy is now almost invisible and getting these policies right matters for more than just U S living standards The United States ability to influence world events rests on a robust competitive economy But without further investment in education infrastructure and innovation Alden and Strauss show the United States runs the risk of endangering its greatest competitive advantage Through insightful analysis and engaging graphics *How America Stacks Up* outlines the challenges faced by the United States and prescribes solutions that will ensure a healthy competitive U S economy for years to come

Plant Glycobiology - a sweet world of

lectins, glycoproteins, glycolipids and glycans Els J. M. Van Damme, Nausicaä Lannoo, Cécile Albenne, Elisabeth Jamet, 2015-02-12 Plants synthesize a wide variety of unique glycan structures which play essential roles during the life cycle of the plant. Being omnipresent throughout the plant kingdom ranging from simple green algae to modern flowering plants, glycans contribute to many diverse processes. Glycans can function as structural components in the plant cell wall, assist in the folding of nascent proteins, act as signaling molecules in plant defense responses or ER stress pathways, or serve within the energy metabolism of a plant. In most cases, glycans are attached to other macromolecules to form so-called glycoconjugates, e.g. glycoproteins, proteoglycans, and glycolipids, but they can also be present as free entities residing in the plant cell. Next to the broad complex set of glycans, plants also evolved an elaborate collection of lectins or proteins with a lectin-like domain which can recognize and bind to endogenous plants' own or exogenous foreign glycans. Though still poorly understood in plants, the dynamic interactions between lectins and carbohydrate structures are suggested to be involved in gene transcription, protein folding, protein transport, cell adhesion, signaling, as well as defense responses. As such a complex and largely undetermined glycan interactome is established inside plant cells between cells and their surrounding matrix, inside the extracellular matrix, and even between organisms. Studying the biological roles of plant glycans will enable us to better understand plant development and physiology in order to fully exploit plants for food, feed, and production of pharmaceutical proteins. In this Research Topic, we want to provide a platform for articles describing the latest research perspectives and methodologies related to the fascinating world of plant glycobiology with a focus on following subjects: 1. Identification and characterization of plant glycans, their biosynthetic and degradation enzymes; 2. Characterization of plant lectins and glycoproteins; 3. Plant glycans in the plant's energy metabolism; 4. Role of plant glycans in plant defense signaling; 5. Use of plant lectins in pest control; 6. Plant lectins as new tools in human medicine; 7. Glycoengineering in plants. **The Opposite of Hate** Sally Kohn, 2018-04-10 Brilliantly illustrates the immense and disarming power of changing course and driving not toward division but toward civility and mutual respect. Ms. magazine. As a progressive commentator on Fox News and now CNN, Sally Kohn has made a career out of bridging intractable political differences. In this age of dangerous partisan resentment and rising bigotry, she decided to investigate hate itself to better consider how we can stop it. With her trademark humor and humanity, Kohn introduces us to leading researchers and scientists who are exploring the evolutionary and cultural roots of hate. She travels to Rwanda, the Middle East, and across the United States talking with former terrorists and reformed white supremacists, and even sitting down with some of her own Twitter trolls. What she discovers is surprising. All of us harbor hate, but the powerful acknowledgment that we are all in this together can lead us out of the wilderness. The opposite of hate is connection. The Precarious Generation Judith Bessant, Rys Farthing, Rob Watts, 2017-05-08 This book draws on a wealth of evidence including young people's own stories to document how they are now faring in increasingly unequal societies like America Britain Australia France and Spain It points to systematic generational inequality as those born since 1980 become the first generation to have a lower standard of living than previous generations While governments and experts typically explain this by referring to globalization new technologies or young people's deficits the authors of this book offer a new political economy of generations which identifies the central role played by governments promoting neoliberal policies that exacerbate existing social inequalities based on age ethnicity gender and class The book is a must read for social science students human service workers and policy makers and indeed for anyone interested in understanding the impact of government policy over the last 40 years on young people

The Great Transition Bruce M. S. Campbell, 2016-06-23 In the fourteenth century the Old World witnessed a series of profound and abrupt changes in the trajectory of long established historical trends Transcontinental networks of exchange fractured and an era of economic contraction and demographic decline dawned from which Latin Christendom would not begin to emerge until its voyages of discovery at the end of the fifteenth century In a major new study of this Great Transition Bruce Campbell assesses the contributions of commercial recession war climate change and eruption of the Black Death to a far reaching reversal of fortunes from which no part of Eurasia was spared The book synthesises a wealth of new historical palaeo ecological and biological evidence including estimates of national income reconstructions of past climates and genetic analysis of DNA extracted from the teeth of plague victims to provide a fresh account of the creation collapse and realignment of Western Europe's late medieval commercial economy
