Radiocommunications **What We Learned From Pisa: The Outstanding Performance Of Students In Hong Kong**

And East Asia Esther Sui-chu Ho, 2017-06-09 The outstanding performance of East Asian societies in the Programme for International Student Assessment PISA is one of the most widely discussed topics in international assessments PISA is a worldwide study of scholastic performance conducted by the Organisation for Economic Co operation and Development OECD of 15 year old pupils in mathematics science and reading This book provides readers with a comprehensive view on the excellent performance of students in Hong Kong and East Asian societies based on solid empirical data from the first five cycles of the PISA study from 2000 to 2012 Adopting a broad perspective this book links the performance of students to themselves their families and respective schools the three major selves and social contexts that exert powerful influence on young people in Hong Kong It is unique that the book does not only define student outcomes narrowly as cognitive performance on various tests in PISA but also employs a number of affective indicators such as students self regulated learning their self concept measures and attitudes towards learning The book argues that schooling is a complex enterprise and the relationships between school outcomes and the larger families schools and societal contexts are even more complex The book utilizes summary statistics and multivariate methods to investigate how various measures of student outcomes are influenced by these contextual factors

Mathematical Competencies in the Digital Era Uffe Thomas Jankvist, Eirini Geraniou, 2023-02-20 This book focuses on the potential interplay between two distinct yet related paradigm shifts in mathematics education drawing on the notion of networking of theories through illustrative case studies from the Danish educational system and beyond The first paradigm shift is the massive introduction of digital technology in the teaching and learning of the subject the second is a shift from the traditional focusing on mastering of skills and knowledge to being concerned with the possession and development of mathematical competencies This book builds on the Danish KOM Competencies and the Learning of Mathematics project which sources its description of mathematical mastery primarily on the notion of a mathematical competency rather than on lists of topics concepts and results This allows for an overarching framework which captures the perspectives of mathematics teaching and learning at whichever educational level While the KOM framework does not in detail address the role of digital technologies in relation to its description of different types of mathematical competencies etc the chapters of this book set out to do exactly this while in the process also drawing on a selection of other theoretical constructs and frameworks from mathematics education research Starting with introductory chapters by key researchers in the area the book brings forth chapters for each of the KOM framework's eight mathematical competencies authored by Nordic researchers in combination with international scholars The KOM framework also operates with three types of overview and judgement which are specifically addressed in relation to the role of digital technologies in the third part of the book The fourth and final part of the book broadens the scene and provides chapters of a more perspective nature in relation to mathematical competencies in the digital era The book's preface is by Susanne Prediger

Failure Vicki E. Alger, 2016-07-01 A comprehensive account and frank assessment of federal involvement in education is

long overdue Education policy expert Vicki E Alger remedies this deficiency with her book *Failure The Federal Miseducation of America's Children*. As its title indicates *Failure* makes no effort to sugar coat its findings. Created in 1979 after a lobbying campaign that spanned generations the Department of Education has failed to live up to its promises. Federal involvement whether related to testing funding or academic curricula has failed to abide by the Constitution's implication that education must remain the domain only of state and local governments and private institutions. Most of all the central government's pervasive meddling in education has failed America's school children and their parents. Education policy has long been mired in controversies often with opposing sides missing the mark. *Failure* helps us step back from the skirmish du jour and redirects our focus to the big picture showing us what's gone wrong over the decades and the institutional causes of these failures. It also offers a bold blueprint for returning the federal government to its constitutional role and for cultivating an educational system that meets the needs of students and parents rather than bureaucrats. Concerned citizens of every stripe will benefit from *Failure's* history of federal education policy its brutally honest report card for the Department of Education its look at education systems across the globe and its ambitious policy recommendations. *Failure* might even succeed in reframing the way the federal education establishment thinks about education policy.
