Graphics Recognition. Recent Advances Atul K. Chhabra, Dov Dori, 2003-06-29. This edited volume contains refereed and improved versions of select papers that were presented at the third IAPR Workshop on Graphics Recognition (GREC 99) held at Rambagh Palace in Jaipur, India, 26-27 September 1999. The workshop was organized by the TC10 Technical Committee on Graphics Recognition of the IAPR. Edited volumes from the previous two workshops in this series are also available as Lecture Notes in Computer Science volumes 1072 and 1389. Graphics recognition is the study of techniques for computer interpretation of images of line drawings and symbols. This includes methods such as vectorization, symbol recognition and table and chart recognition for applications such as engineering drawings, schematics, logic drawings, maps, diagrams and musical scores. Some recently developed techniques include graphics-based information or drawing retrieval and recognition of online graphical strokes. With the recent advances in the field, there is now a need to develop benchmarks for evaluating and comparing algorithms and systems. Graphics recognition is a growing field of interest in the broader document image recognition community. The GREC 99 workshop was attended by fifty people from fifteen countries. The workshop program consisted of six technical sessions. Each session began with a half-hour invited talk which was followed by several short talks. Each session closed with a half-hour panel discussion where the authors addressed questions from the other participants. Several interesting new research directions were discussed at the workshop.
