*Phenolic Resins* A. Gardziella, L.A. Pilato, A. Knop, 2013-06-29 A backward glance of the many new industries that emerged in the 20th century would surely recognize communications automobile aircraft computer and several others that have had a global impact on world economy Yet another industry and an often neglected industry made its debut early in the 20th century the Plastics Industry The Plastics Industry owes its identity to the brilliance of Dr Leo Hendrik Baekeland 1863 1944 He discovered the technique currently in use to this day to manufacture highly crosslinked plastics by transforming monomer and or oligomeric phenolic materials into attractive phenolic products Today phenolics represent one of the many different types of commercially available plastics thermoset and thermoplastic Phenolics are distinguished by a broad array of application areas that utilize phenolics as compared to other thermoset or thermoplastic resins Thermoplastic resins transformed into molded products films or synthetic fibers polypropylene as an example are rapidly recognized as plastics whereas the phenolic resin is a component in a material system and the identity of the phenolic resin within the system is not easily identified as plastic These systems consist of fiber reinforced composites honeycomb paneling electrical laminates acid resistant coatings wood panels glass fiber or rock wool insulation Phenolic resin identity is hidden and has little consumer recognition or identity
