Mathematical Approaches to Biomolecular Structure and Dynamics Jill P. Mesirov, Klaus Schulten, De Witt Summers, 2012-12-06 This IMA Volume in Mathematics and its Applications MATHEMATICAL APPROACHES TO BIOMOLECULAR STRUCTURE AND DYNAMICS is one of the two volumes based on the proceedings of the 1994 IMA Summer Program on Molecular Biology and comprises Weeks 3 and 4 of the four week program Weeks 1 and 2 appeared as Volume 81 Genetic Mapping and DNA Sequencing We thank Jill P Mesirov Klaus Schulten and De Witt Summers for organizing Weeks 3 and 4 of the workshop and for editing the proceedings We also take this opportunity to thank the National Institutes of Health NIH National Center for Human Genome Research the National Science Foundation NSF Biological Instrumentation and Resources and the Department of Energy DOE whose financial support made the summer program possible

A vner Friedman Robert Gulliver v PREFACE The revolutionary progress in molecular biology within the last 30 years opens the way to full understanding of the molecular structures and mechanisms of living organisms Interdisciplinary research in mathematics and molecular biology is driven by ever growing experimental theoretical and computational power The mathematical sciences accompany and support much of the progress achieved by experiment and computation as well as provide insight into geometric and topological properties of biomolecular structure and processes This volume consists of a representative sample of the papers presented during the last two weeks of the month long Institute for Mathematics and Its Applications Summer 1994 Program in Molecular Biology

Mozzochi, 2000 This book concentrates on the final chapter of the story of perhaps the most famous mathematics problem of our time Fermat's Last Theorem The full story begins in 1637 with Pierre de Fermat's enigmatic marginal note in his copy of Diophantus's Arithmetica It ends with the spectacular solution by Andrew Wiles some 350 years later The Fermat Diary provides a record in pictures and words of the dramatic time from June 1993 to August 1995 including the period when Wiles completed the last stages of the proof and concluding with the mathematical world's celebration of Wiles result at Boston University This diary takes us through the process of discovery as reported by those who worked on the great puzzle Gerhard Frey who conjectured that Shimura Taniyama implies Fermat Ken Ribet who followed a difficult and speculative plan of attack suggested by Jean Pierre Serre and established the statement by Frey and Andrew Wiles who announced a proof of enough of the Shimura Taniyama conjecture to settle Fermat's Last Theorem only to announce months later that there was a gap in the proof Finally we are brought to the historic event on September 19 1994 when Wiles with the collaboration of Richard Taylor dramatically closed the gap The book follows the much in demand Wiles through his travels and lectures finishing with the

Instructional Conference on Number Theory and Arithmetic Geometry at Boston University There are many important names in the recent history of Fermat's Last Theorem This book puts faces and personalities to those names Mozzochi also uncovers the details of certain key pieces of the story For instance we learn in Frey's own words the story of his conjecture about his informal discussion and later lecture at Oberwolfach and his letter containing the actual statement We learn from Faltings about his crucial role in the weeks before Wiles made his final announcement An appendix contains the Introduction of Wiles' Annals paper in which he describes the evolution of his solution and gives a broad overview of his methods Shimura explains his position concerning the evolution of the Shimura-Taniyama conjecture Mozzochi also conveys the atmosphere of the mathematical community and the Princeton Mathematics Department in particular during this important period in mathematics This eyewitness account and wonderful collection of photographs capture the marvel and unfolding drama of this great mathematical and human story

Despite the renown of the Fields Medals J C Fields has been until now a rather obscure figure and recovering details about his professional activities and personal life was not at all a simple task This work is a triumph of persistence with far flung archival and documentary sources and provides a rich non mathematical portrait of the man in all aspects of his life and career Highly readable and replete with period detail the book sheds useful light on the mathematical and scientific world of Fields time and is sure to remain the definitive biographical study Tom Archibald Simon Fraser University Burnaby BC Canada Drawing on a wide array of archival sources Riehm and Hoffman provide a vivid account of Fields' life and his part in the founding of the highest award in mathematics Filled with intriguing detail from a childhood on the shores of Lake Ontario through the mathematics seminars of late 19th century Berlin to the post WW1 years of the fragmented international mathematical community it is a richly textured story engagingly and sympathetically told Read this book and you will understand why Fields never wanted the medal to bear his name and yet why quite rightly it does June Barrow Green Open University Milton Keynes United Kingdom One of the little known effects of World War I was the collapse of international scientific cooperation In mathematics the discord continued after the war's end and after the Treaty of Versailles had been signed in 1919 Many distinguished scientists were involved in the war and its aftermath and from their letters and papers now almost a hundred years old we learn of their anguished wartime views and their struggles afterwards either to prolong the schism in mathematics or to end it J C Fields the foremost Canadian mathematician of his time was educated in Canada the United States and Germany and championed an international spirit of cooperation to further the frontiers of mathematics It was during the awkward post war period that J C Fields established the Fields Medal an international prize for outstanding research which soon became the highest award in mathematics J C Fields intended it to be

an international medal and a glance at the varying backgrounds of the fifty two Fields medallists shows it to be so Who was Fields What carried him from Hamilton Canada West where he was born in 1863 into the middle of this turbulent era of international scientific politics A modest mathematician he was an unassuming man This biography outlines Fields life and times and the difficult circumstances in which he created the Fields Medal It is the first such published study [A History of Mathematics in the United States and Canada](#) David E.
