(Hrsg.), 2012 **Architectures for Adaptive Software Systems** Raffaella Mirandola, Ian Gorton, Christine Hofmeister, 2009-06-18 Much of a software architect's life is spent designing software systems to meet a set of quality requirements General software quality attributes include scalability security performance or reliability Quality attribute requirements are part of an application's non functional requirements which capture the many facets of how the functional requirements of an application are achieved Understanding modeling and continually evaluating quality attributes throughout a project lifecycle are all complex engineering tasks which continue to challenge the software engineering scientific community While we search for improved approaches methods formalisms and tools that are usable in practice and can scale to large systems the complexity of the applications that the software industry is challenged to build is ever increasing Thus as a research community there is little opportunity for us to rest on our laurels as our innovations that address new aspects of system complexity must be deployed and validated To this end the 5th International Conference on the Quality of Software Architectures QoSA 2009 focused on architectures for adaptive software systems Modern software systems must often reconfigure their structure and behavior to respond to continuous changes in requirements and in their execution environment In these settings quality models are helpful at an architectural level to guide systematic model driven software development strategies by evaluating the impact of competing architectural choices *National Union Catalog*, 1953 **Medical Informatics Berlin 1979** B. Barber, F. Gremy, K. Überla, G. Wagner, 2012-12-06 The HIB 79 Congress is the second one organized by the European Federation for Medical Informatics EFMI The host society is the Deutsche Gesellschaft für Medizinische Dokumentation Informatik und Statistik GMDS who are holding their 24th annual meeting at this time The program of MIB 79 covers every aspect of the application of information science to medicine and public health and as such

represents the state of the art Medical Informatics M I is now at a turning point To date despite the efforts made by specialists in many countries the balance sheet of M I remains rather poor One of the reasons for this situation is the fact that the computers of yesterday were the prerogative of an elite of users They were expensive difficult to use remote from the users and mainly in the hands of a sacerdotal caste of data processing specialists In the future data processing facilities will be cheap easy to handle and immediately accessible Data processing will have a chance of becoming truly democratic thanks to two important and complementary trends in computer technology 1 a network due to computer communication partnership 2 miniaturization due to the dramatic expansion of micro processor and computer technology IV The combination of these two main hardware achievements for which some neologisms have been invented communication in the USA and telecommunications in France will lead to a completely new way of processing data which may be called distributed informatics

**Cognitive Linguistics and Lexical Change** Natalya I. Stolova, 2015-03-27 This monograph offers the first in depth lexical and semantic analysis of motion verbs in their development from Latin to nine Romance languages Spanish French Italian Portuguese Romanian Catalan Occitan Sardinian and Raeto Romance demonstrating that the patterns of innovation and continuity attested in the data can be accounted for in cognitive linguistic terms At the same time the study illustrates how the insights gained from

Latin and Romance historical data have profound implications for the cognitive approaches to language in particular for Leonard Talmy's motion framing typology and George Lakoff and Mark Johnson's conceptual metaphor theory. The book should appeal to scholars interested in historical Romance linguistics, cognitive linguistics and lexical change. Web and Communication Technologies and Internet-Related Social Issues - HSI 2005 Shinji Shimojo, Shingo Ichii, Tok Wang Ling, Kwan-Ho Song, 2005-08-25. The Internet has now become an integral part of everyday life for hundreds of millions of people around the world. The uses of the Internet have augmented commerce, communication, education, governance, entertainment, health care, etc. E-mail has become an indispensable part of life; the Web has become an indispensable source of information on just about everything people now use. Government websites receive instructions and information and paperwork with the government; many major online businesses have been created such as Amazon, eBay, Google, Travelocity, eTrade, etc. However, the uses of the Internet have also had serious negative effects, including spam, the spreading of viruses and worms, spyware, phishing, hacking, online fraud, invasions of privacy, etc. Viruses and worms often bring down tens of millions of computers around the world; many people get duped into furnishing their personal identifications and bank and insurance account information, etc. Hackers break into government and corporation computers to steal critical data; unsubstantiated rumors about individuals or organizations spread like wildfire on the Internet, etc. Further, the uses of the Internet are creating new paradigms in areas such as copyright, governance, etc. The widespread use of peer-to-peer file sharing systems started by Napster is forcing a reassessment of the value of holding copyright on digital media. Internet postings by vocal citizens to the Web sites of the news media, government offices and elected government officials are impacting government policies and swaying the opinions of other citizens.
