Predictability, Stability, and Chaos in N-Body

Dynamical Systems Archie E. Roy, 2012-12-06 The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Cortina d'Ampezzo, Italy, between August 6 and August 17, 1990, under the title Predictability, Stability, and Chaos in N-Body Dynamical Systems. The Institute was the latest in a series held at three yearly intervals from 1972 to 1987 in dynamical astronomy, theoretical mechanics, and celestial mechanics. These previous institutes, held in high esteem by the international community of research workers, have resulted in a series of well-received Proceedings. The 1990 Institute attracted 74 participants from 16 countries, six outside the NATO group. Fifteen series of lectures were given by invited speakers; additionally, some 40 valuable presentations were made by the younger participants, most of which are included in these Proceedings. The last twenty years, in particular, has been a time of increasingly rapid progress in tackling long-standing and also newly arising problems in dynamics of N-body systems: point mass and non-point mass, a rate of progress achieved because of correspondingly rapid developments of new computer hardware and software together with the advent of new analytical techniques. It was a time of exciting progress culminating in the ability to carry out research programmes into the evolution of the outer Solar System over periods of more than 10 years and to study star clusters and galactic models in unprecedented detail.
