

WHICH LENSES CAN YOU USE

Nikon makes different lenses for its DX- and FX-format cameras. Can you mix and match?

FX lens on an FX body

Naturally, there's no problem here. The FX sensor is larger, but the image circle produced by FX lenses is big enough to cover it. If you have some old 35mm Nikon film camera lenses, those will match the FX format too.

FX lenses are designed for FX bodies

FX lens on an DX body

This works fine too, though the larger image circle of the lens is partially wasted because the smaller DX sensor captures a smaller area in the centre. FX lenses are a good investment, though, if you might move up to the FX format in future.

DX bodies use only a part of an FX lens's image area

DX lens on an DX body

It's the perfect match. DX lenses produce an image circle just larger than the DX sensor size. If you need a wideangle lens for your DX camera, it will have to be a proper DX lens - FX lenses don't come in short enough focal lengths.

DX lenses produce a smaller image circle to suit the smaller sensor

DX lens on an FX body

You can use DX lenses on FX cameras. The camera recognises it's a DX lens and automatically switches to 'crop' mode, where only a DX-sized area in the middle of the sensor is used. The resolution of the images is reduced as a result, though.

FX bodies will automatically crop to the DX format with a DX lens
