Carmichael, Mark L. Botton, Paul K.S. Shin, Siu Gin Cheung, 2015-11-09 This book reports significant progress of scientific research on horseshoe crabs including aspects of evolution genetics ecology population dynamics general biology and physiology within the recent 10 years It also highlights the emerging issues related to world wide conservation threats status and needs The contributions in this book represent part of an ongoing global effort to increase data and concept sharing to support basic research and advance conservation for horseshoe crabs **Stellate Cells in Health and Disease** Chandrashekhhar Gandhi, Massimo Pinzani, 2015-04-10 Stellate Cells in Health and Disease is a comprehensive reference providing the most up to date knowledge and perspectives on the function of stellate cells affecting the liver and other organs The text presents comprehensive coverage of their already established role in hepatic fibrosis along with the newer emerging evidence for stellate cell participation in the liver cell hepatocyte survival and regeneration hepatic immunobiology transplant tolerance and liver cancer Chapters describe both animal and human research and the relevance of findings from animal research to human pathophysiology and also contain sections on future directions which will be of special interest to basic and clinical researchers working on liver fibrosis hepatic biology and pathobiology Presents coverage of the mechanisms of liver fibrosis with stellate cells as a target for therapy Shows stellate cells as a major participant in hepatic immunobiology including transplantation immunology Key illustrations show the phenotypical changes in stellate cells in situ and tissue culture their interactions with other cell types signaling pathways and demonstrate the functions and roles of stellate cell in pathological processes *Immunology of the GI Tract* Luis Rodrigo, 2022-12-21 The intestine is the largest digestive organ in the human body and one of the largest organs in contact with the outside world In addition to digesting food to facilitate the absorption of nutrients it has a variety of other functions including the transmission of information and regulation of the metabolism Due to its unique structure the intestine is constantly exposed to various antigens and microbes To protect the body from pathogens while also maintaining a stable environment the human intestinal tract has evolved unique regional immune characteristics maintained by the mature intestinal mucosal immune system This intricate system involves intestinal epithelial cells and intestinal lymphoid tissue composed of Peyer's patches isolated lymphoid follicles mesenteric lymph nodes and so on The congenital and adaptive immune mechanisms created by the unique structure function and microenvironment of the intestine differ from those of the central and peripheral immune organs forming the regional immunity of the intestine Intestinal flora also plays an important role in maintaining intestinal homeostasis altering the structure and function of the immune system reshaping the immune microenvironment and promoting interference with the

development of specific diseases In fact the immune function of the intestinal region directly affects the development of many intestine specific diseases However the integrity of this function depends on the expression of congenital genes and the regulation of the neuroendocrine system The microenvironment created by intestinal flora and its products also affects the immunity of the intestinal region In early life appropriate intestinal colonization by specific microflora stimulates the maturation of the intestinal mucosa associated lymphoid tissue If the appropriate intestinal flora fails to form during this life stage the function of the intestinal immune system becomes impaired leading to increased incidence and or morbidity of certain intestinal diseases including ulcerative colitis Crohn s disease and others Uterine Cancer Franco
