Paper 02 – General Proficiency

2 hours 40 minutes

22 MAY 2013 (a.m.)

1. Number

a. –

i. $\frac{11}{18}$

ii. 1.3524

b. The better buy is decided on how much are you getting per dollar spent.

More is better. So we compare both $\frac{350\text{ml}}{\$4.2} = 83.3\text{ml} / \$$ and

$\frac{450\text{ml}}{\$5.13} = 87.72\text{ml} / \$$, we see that buying the 450ml is better

c. –

i. \$768 interest in the first year

ii. \$6000 remains to be paid

iii. \$480 interest in the second year calculated on the reducing balance

2. Algebra

a. Factorize completely

i. $2x^3 - 8x = 2x(x-2)(x+2)$

ii. $3x^2 - 5x - 2 = (3x+1)(x-2)$

b. –

i. $F = \frac{9}{5}C + 32 \Rightarrow C = \frac{5}{9}(F - 32)$

ii. $C = \frac{5}{9}(113 - 32) = 45^\circ C$

c. –

i. .

a. $10(500 - x)$

Mathematical Intelligence Mubeen Junaid, 2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of

numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself

Six Capitals, or Can Accountants Save the Planet?: Rethinking Capitalism for the Twenty-First Century Jane Gleeson-White, 2015-02-25 A timely and fascinating account of the revolution going on in the world of finance from the acclaimed author of Double Entry This is the story of a twenty first century revolution being led by the most unlikely of rebels accountants Only the second revolution in accounting since double entry bookkeeping began it is of seismic proportions driven by the 2008 financial crash and our ongoing environmental crisis The changes it will wreak are profound and far reaching and not only will transform the way the world does business but also will alter the nature of capitalism While the wealth of nations and corporations has been vital to the global economy increasingly the world is coming to realize that such endless growth is limited by the earth's resources and comes at a huge price to the planet and to human well being It simply cannot be sustained This revolution demands that we go beyond merely accounting for traditional financial and industrial capital and take account of the benefits and detriments to the natural world and society It urges us to include four new categories of wealth intellectual such as intellectual property human skills productivity and health social and relationship shared norms and values and natural environment Making them part of our financial statements and GDP figures may be the only way to address the many calamities we face Just two years ago this revolution seemed idealistic and unlikely Today it is quickly unfolding In 2012 the sea change year two key initiatives took root an international movement to transform how corporate accounting is calculated and the rise of incorporating the effects on the environment to the accounting of national and global economies Six Capitals tells the story of this coming new age in capitalism evaluating its promise and the disaster that lies ahead if it is not implemented

ENVIRONMENTAL SUSTAINABILITY IN THE 21ST CENTURY: EMERGING

ISSUES AND THE WAY FORWARD Dr. Ranjan Sarkar, The Book Environmental Sustainability In The 21st Century Emerging Issues And The Way Forward represents the various emerging issues very much relevant to our environment in this 21st Century An Environment is everything that is around us which includes both living and nonliving things such as soil water animals and plants which adapt themselves to their surroundings The environment plays an important role in the existence of life on the planet earth The most serious environmental problems of the twenty first century have the potential to alter the course of life on this planet Global warming toxic waste water and air pollution acid rain and shrinking energy supplies are frightening challenges that may threaten our future if we do not face up to them In this book 23 chapters have been incorporated on various environmental issues and challenges we are facing now a days from various academicians and researchers

Hello World Hannah Fry, 2018-09-18 Shortlisted for the 2018 Baillie Gifford Prize and the 2018 Royal Society Investment Science Book Prize A beautifully accessible guide One of the best books yet written on data and algorithms Times UK If you were accused of a crime who would you rather decide your sentence a mathematically consistent algorithm incapable of empathy or a compassionate human judge prone to bias and error What if you want to buy a driverless car and must choose between one programmed to save as many lives as possible and another that prioritizes the lives of its own passengers And would you agree to share your family s full medical history if you were told that it would help researchers find a cure for cancer These are just some of the dilemmas that we are beginning to face as we approach the age of the algorithm when it feels as if the machines reign supreme Already these lines of code are telling us what to watch where to go whom to date and even whom to send to jail But as we rely on algorithms to automate big important decisions in crime justice healthcare transportation and money they raise questions about what we want our world to look like What matters most Helping doctors with diagnosis or preserving privacy Protecting victims of crime or preventing innocent people being falsely accused Hello World takes us on a tour through the good the bad and the downright ugly of the algorithms that surround us on a daily basis Mathematician Hannah Fry reveals their inner workings showing us how algorithms are written and implemented and demonstrates the ways in which human bias can literally be written into the code By weaving in relatable real world stories with accessible explanations of the underlying mathematics that power algorithms Hello World helps us to determine their power expose their limitations and examine whether they really are improvement on the human systems they replace

Neutrosophic Graph Theory and Algorithms Smarandache, Florentin, Broumi, Said, 2019-10-25 Graph theory is a specific concept that has numerous applications throughout many industries Despite the advancement of this technique graph theory can still yield ambiguous and imprecise results In order to cut down on these indeterminate factors neutrosophic logic has emerged as an applicable solution that is gaining significant attention in solving many real life decision making problems that involve uncertainty impreciseness vagueness incompleteness inconsistency and indeterminacy However empirical research on this specific graph set is lacking Neutrosophic Graph Theory and Algorithms is a collection of

From My Life to Yours Annemieke Harmonie,2018-11-13

Being born a sensitive soul is both a gift and a burden in our society Author Annemieke Harmonie understands this all too well She thinks differently and feels deeply and now she seeks to inspire a new reality and a new way of living *From My Life to Yours* presents her story one filled with initiations challenges adversity and magic From an early age Annemieke tried to make sense of this world and to find out who she is and why others can't see what she does Her connection with the natural world became her guide A musician from the age of nine she traveled through the world with her harp and visited a wide variety of places She finally settled far from her homeland of the Netherlands in New Zealand where she raised and homeschooled her three children on her own Through both music and various healing modalities Annemieke found ways to reach out to others and make this world a better place for all In this memoir one woman shares her life journey in both music and healing describing a challenging life worth living that calls forth love in those around her

A Chronicle of Permutation Statistical Methods Kenneth J. Berry,Janis E. Johnston,Paul W. Mielke Jr.,2014-04-11 The focus of this book is on the birth and historical development of permutation statistical methods from the early 1920s to the near present Beginning with the seminal contributions of R A Fisher E J G Pitman and others in the 1920s and 1930s permutation statistical methods were initially introduced to validate the assumptions of classical statistical methods Permutation methods have advantages over classical methods in that they are optimal for small data sets and non random samples are data dependent and are free of distributional assumptions Permutation probability values may be exact or estimated via moment or resampling approximation procedures Because permutation methods are inherently computationally intensive the evolution of computers

and computing technology that made modern permutation methods possible accompanies the historical narrative. Permutation analogs of many well known statistical tests are presented in a historical context including multiple correlation and regression analysis of variance contingency table analysis and measures of association and agreement. A non-mathematical approach makes the text accessible to readers of all levels. *Non-Bullshit Innovation* David Rowan, 2019-05-16 updated with new material. Digital transformation and disruptive innovation used to be empty buzzwords serving to justify pointless box ticking and absurd corporate posturing. And then a global pandemic suddenly forced every kind of organization to embrace genuine urgent innovation as a matter of survival. But how can we ensure that the non-bullshit version of innovation delivers economic recovery at this crucial moment? Are there strategies we can all adapt from the world's most creative leaders to innovate effectively in our own lives? David Rowan, founding editor in chief of WIRED UK, embarked on a twenty country quest to find out. Packed full of tips for anyone looking for radical ways to adapt and thrive in the digital age, this carefully curated selection of stories will prepare you for whatever the future may bring because the world will never move this slowly again. _____ In this remarkable book David Rowan tells a story of transformation: how an organisation has found a new way of doing things through innovation driven by ruthless entrepreneurial imagination. What is especially useful is that he does not just stick with small startups, let alone dreamy inventors. He finds innovation in big companies and even within governments. Matt Ridley, *The Times*.
