

EXAMPLES OF DOMAINS AND RANGES FROM GRAPHS

Important notes about Domains and Ranges from Graphs:

- Remember that domain refers to the x-values that are represented in a problem and range refers to the y-values that are represented in a problem.
- Sometimes it isn't possible to list all the values that x or y can be because the graph is continuous and made up of an infinite number of points, like a line, a ray, or even a segment.
- In a continuous graph, to determine the domain, you should focus on looking left to right of the graph.
- In a continuous graph, to determine the range, you should focus on looking bottom to top of the graph.
- We use interval notation to help us describe the domain and range for graphs that represent continuous situations.
- Please review the following information to help you describe the domain and range for these different types of continuous graphs.

Example 1: A continuous graph with two endpoints.

Important Notes:

- To find the domain for a graph with two endpoints, always identify the x-values of the point furthest to the left and the point furthest to the right.
- For the range, you want the y-values of the lowest point and the highest point.

Domain: $-7 \leq x < 3$

- Notice that this graph has two endpoints, so the graph starts and stops and the domain covers all x-values between the two endpoints which makes it a continuous graph.
- Since the left and right endpoints are at $(-7, -3)$ and $(3, 1)$, the graph covers all x-values between the x-values of -7 and 3 .
- Notice that the first endpoint is a closed circle so it includes that point, but the second endpoint is an open circle, so it does not include that point.
- Therefore, the graph covers all x-values ≥ -7 AND all x-values < 3 – we write that in interval notation as $[-7 \leq x < 3]$.

Range: $-3 \leq y < 1$

- Notice that this graph has two endpoints, so the graph starts and stops and the range covers all y-values between the two endpoints which makes it a continuous graph.
- Since the bottom and top endpoints are at $(-7, -3)$ and $(3, 1)$, the graph covers all y-values between the y-values of -3 and 1 .
- Notice that the first endpoint is a closed circle so it includes that point, but the second endpoint is an open circle, so it does not include that point.
- Therefore, the graph covers all y-values ≥ -3 AND all y-values < 1 – we write that in interval notation as $[-3 \leq y < 1]$.

Mathlinks Grade 8 Student Packet 11

N Colangelo

Mathlinks Grade 8 Student Packet 11:

Reviewing **Mathlinks Grade 8 Student Packet 11**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is truly astonishing. Within the pages of "**Mathlinks Grade 8 Student Packet 11**," an enthralling opus penned by a highly acclaimed wordsmith, readers attempt an immersive expedition to unravel the intricate significance of language and its indelible imprint on our lives. Throughout this assessment, we shall delve into the book's central motifs, appraise its distinctive narrative style, and gauge its overarching influence on the minds of its readers.
