*Performing Math* Andrew Fiss, 2020-11-13 Performing Math tells the history of expectations for math communication and the conversations about math hatred and math anxiety that occurred in response Focusing on nineteenth century American colleges this book analyzes foundational tools and techniques of math communication the textbooks that supported reading aloud the burnings that mimicked pedagogical speech the blackboards that accompanied oral presentations the plays that proclaimed performers identities as math students and the written tests that redefined student performance Math communication and math anxiety went hand in hand as new rules for oral communication at the blackboard inspired student revolt and as frameworks for testing student performance inspired performance anxiety With unusual primary sources from over a dozen educational archives Performing Math argues for a new performance oriented history of American math education one that can explain contemporary math attitudes and provide a way forward to reframing the problem of math anxiety

*When Life is Linear* Tim Chartier, 2015-01-07 From simulating complex phenomenon on supercomputers to storing the coordinates needed in modern 3D printing data is a huge and growing part of our world A major tool to manipulate and study this data is linear algebra When Life is Linear introduces concepts of matrix algebra with an emphasis on application particularly in the fields of computer graphics and data mining Readers will learn to make an image transparent compress an image and rotate a 3D wireframe model In data mining readers will use linear algebra to read zip codes on envelopes and encrypt sensitive information Chartier details methods behind web search utilized by such companies as Google and algorithms for sports ranking which have been applied to creating brackets for March Madness and predict outcomes in FIFA World Cup soccer The book can serve as its own resource or to supplement a course on linear algebra

*Fatigue and Fracture Behaviour of Additively Manufactured Mechanical Components* Roberto Citarella, Paulo M. S. T. de Castro, Angelo Maligno, 2021-02-19 The advent of additive manufacturing AM processes applied to the fabrication of structural components creates the need for design methodologies supporting structural optimization approaches that take into account the specific characteristics of the process While AM processes enable unprecedented geometrical design freedom which can result in significant reductions of component weight on the other hand they have implications in the fatigue and fracture strength due to residual stresses and microstructural

features This is linked to stress concentration effects and anisotropy that still warrant further research This Special Issue of Applied Sciences brings together papers investigating the features of AM processes relevant to the mechanical behavior of AM structural components particularly but not exclusively from the viewpoints of fatigue and fracture behavior Although the focus of the issue is on AM problems related to fatigue and fracture articles dealing with other manufacturing processes with related problems are also be included

**Regulating Artificial Intelligence** Thomas Wischmeyer,Timo Rademacher,2019-11-29 This book assesses the normative and practical challenges for artificial intelligence AI regulation offers comprehensive information on the laws that currently shape or restrict the design or use of AI and develops policy recommendations for those areas in which regulation is most urgently needed By gathering contributions from scholars who are experts in their respective fields of legal research it demonstrates that AI regulation is not a specialized sub discipline but affects the entire legal system and thus concerns all lawyers Machine learning based technology which lies at the heart of what is commonly referred to as AI is increasingly being employed to make policy and business decisions with broad social impacts and therefore runs the risk of causing wide scale damage At the same time AI technology is becoming more and more complex and difficult to understand making it harder to determine whether or not it is being used in accordance with the law In light of this situation even tech enthusiasts are calling for stricter regulation of AI Legislators too are stepping in and have begun to pass AI laws including the prohibition of automated decision making systems in Article 22 of the General Data Protection Regulation the New York City AI transparency bill and the 2017 amendments to the German Cartel Act and German Administrative Procedure Act While the belief that something needs to be done is widely shared there is far less clarity about what exactly can or should be done or what effective regulation might look like The book is divided into two major parts the first of which focuses on features common to most AI systems and explores how they relate to the legal framework for data driven technologies which already exists in the form of national and supra national constitutional law EU data protection and competition law and anti discrimination law In the second part the book examines in detail a number of relevant sectors in which AI is increasingly shaping decision making processes ranging from the notorious social media and the legal financial and healthcare industries to fields like law enforcement and tax law in which we can observe how regulation by AI is becoming a reality
