Celebrating Life: Customs around the World Victoria R. Williams, 2016-11-21 This book documents hundreds of customs and traditions practiced in countries outside of the United States, showcasing the diversity of birth, coming of age, and death celebrations worldwide. From the beginning of our lives to the end, all of humanity celebrates life's milestones through traditions and unique customs. In the United States, we have specific events like baby showers, rites of passage such as Bat and Bar Mitzvahs, and sweet 16 birthday parties, and sober end of life traditions like obituaries and funeral services that honor those who have died. But what kinds of customs and traditions are practiced in other countries? How do people in other cultures welcome babies, prepare to enter into adulthood, and commemorate the end of the lives of loved ones? This three-volume encyclopedia covers more than 300 birth, life, and death customs, with the book's content organized chronologically by life stage. Volume 1 focuses on birth and childhood customs; Volume 2 documents adolescent and early adulthood customs; and Volume 3 looks at aging and death customs. The entries in the first volume examine pre-birth traditions such as baby showers and other gift-giving events, and post-birth customs such as naming ceremonies, child-rearing practices, and traditions performed to ward off evil or promote good health. The second volume contains information about rites of passage as children become adults, including indigenous initiations, marriage customs, and religious ceremonies. The final volume concludes with coverage on customs associated with aging and death, such as retirement celebrations, elaborate funeral processions, and the creation of fantasy coffins. The set features beautiful color inserts that illustrate examples of celebrations and ceremonies, and includes an appendix of excerpts from primary documents that include legislation on government-accepted names, wedding vows, and maternity/paternity leave regulations.

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which

are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
