mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities. Although at the university level many students do not continue to study mathematics, social science students are confronted with the fact that their disciplines involve learning about statistics, another potential source of anxiety for students who are uncomfortable with dealing with numerical content. Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational, developmental, cognitive, social, and neuroscience researchers. The current collection of papers demonstrates the diversity of the field, offering both new empirical contributions and reviews of existing studies. The contributors also outline future directions for this line of research.

Innovative Approaches in Early Childhood Mathematics Oliver Thiel, Bob Perry, 2020-07-29 The chapters in this book investigate and reflect on many of the issues and challenges raised by the current trends and tensions in early childhood mathematics education. They emanate from seven countries: Australia, Northern Ireland, Norway, Portugal, Spain, Sweden, and Switzerland. Ever since Piaget invented the kindergarten, mathematics has been a part of early childhood pedagogy. Mathematics is an important part of children's daily life which helps them to understand the world around them. Nowadays, early childhood mathematics is in the international spotlight. Partly, this is the result of myriad studies that seem to show that early childhood mathematics achievement is a strong predictor of success or otherwise in future school mathematics, other school subjects, and life itself. Another influence on early childhood mathematics education is the advent of the political and advocacy juggernaut known as STEM (Science, Technology, Engineering, and Mathematics). Early childhood mathematics education is important for children's present and future learning. This book provides a strong collection of current research for the consideration of all in the early childhood education field. It was originally published as a special issue of the *European Early Childhood Education Research Journal*.

Policy, Professionalization, Privatization, and Performance Assessment Theresa J. Gurl, Limarys Caraballo, Leslee Grey, John H. Gunn, David Gerwin, Héfer Bembenuddy, 2016-02-19 This volume reviews the background of mandated teacher performance assessment with an emphasis on policy, privatization, and professionalization. The authors discuss the potential impact of mandated teacher performance assessments on teacher education in the content areas of mathematics, English, and social studies. The perspectives and empirical research examined in this conceptual analysis illustrate the various ways in which the Stanford Center for Assessment, Learning, and Equity (SCALE) Teacher Performance Assessment (edTPA) promises to restructure teacher education in the United States. The authors consider both the affordances and the constraints that teacher performance assessments offer for teacher preparation programs and conclude by discussing the implications of the intersections among policy, privatization, professionalization, and performance assessments of teachers, as well as the relationship between performance assessments and teacher education. The impact of the edTPA on the development of signature pedagogies in teacher education is also discussed.

Kloosterman, Doris Mohr, Crystal Walcott, 2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades 4 and 8 has slowed in recent years it has slowed more on some topics than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the NAEP data show a substantial gap between expectations and performance
