Virtual Fundamental Cycles in Symplectic Topology John W. Morgan, Dusa McDuff, Mohammad Tehrani, Kenji Fukaya, Dominic Joyce, 2019-04-12 The method of using the moduli space of pseudo holomorphic curves on a symplectic manifold was introduced by Mikhail Gromov in 1985 From the appearance of Gromov's original paper until today this approach has been the most important tool in global symplectic geometry To produce numerical invariants of these manifolds using this method requires constructing a fundamental cycle associated with moduli spaces This volume brings together three approaches to constructing the virtual fundamental cycle for the moduli space of pseudo holomorphic curves All approaches are based on the idea of local Kuranishi charts for the moduli space Workers in the field will get a comprehensive understanding of the details of these constructions and the assumptions under which they can be made These techniques and results will be essential in further applications of this approach to producing invariants of symplectic manifolds

The DARPA Model for Transformative Technologies: Perspectives on the U.S. Defense Advanced Research Projects Agency William Boone Bonvillian, Richard Van Atta, Patrick Windham, 2020-01-09 The authors have done a masterful job of charting the important story of DARPA one of the key catalysts of technological innovation in US recent history By plotting the development achievements and structure of the leading world agency of this kind this book stimulates new thinking in the field of technological innovation with bearing on how to respond to climate change pandemics cyber security and other global problems of our time The DARPA Model provides a useful guide for governmental agency and policy leaders and for anybody interested in the role of governments in technological innovation Dr Kent Hughes Woodrow Wilson International Center for

Scholars This volume contains a remarkable collection of extremely insightful articles on the world's most successful advanced technology agency. Drafted by the leading US experts on DARPA, it provides a variety of perspectives that in turn benefit from being presented together in a comprehensive volume. It reviews DARPA's unique role in the US innovation system as well as the challenges DARPA and its clones face today. As the American model is being considered for adoption by a number of countries worldwide, this book makes a welcome and timely contribution to the policy dialogue on the role played by governments in stimulating technological innovation. Prof. Charles Wessner, Georgetown University. The US Defense Advanced Research Projects Agency (DARPA) has played a remarkable role in the creation of new transformative technologies revolutionizing defense with drones and precision-guided munitions and transforming civilian life with portable GPS receivers, voice recognition software, self-driving cars, unmanned aerial vehicles, and most famously, the ARPANET and its successor, the Internet. Other parts of the US Government and some foreign governments have tried to apply the DARPA model to help develop valuable new technologies. But how and why has DARPA succeeded? Which features of its operation and environment contribute to this success? And what lessons does its experience offer for other US agencies and other governments that want to develop and demonstrate their own transformative technologies? This book is a remarkable collection of leading academic research on DARPA from a wide range of perspectives combining to chart an important story from the Agency's founding in the wake of Sputnik to the current attempts to adapt it to use by other federal agencies. Informative and insightful, this guide is essential reading for political and policy leaders as well as researchers and students interested in understanding the success of this agency and the lessons it offers to others.

Noncooperative Approaches to the Theory of Perfect Competition Andreu Mas-Colell, 2014-05-10. Economic Theory, Econometrics, and Mathematical Economics. A Series of Monographs and Textbooks. Noncooperative Approaches to the Theory of Perfect Competition focuses on the application of noncooperative approaches to the theory of perfect competition, including Cournot game, no surplus condition, and Nash equilibria. The selection first elaborates on collusive behavior in noncooperative epsilon equilibria of oligopolies with long but finite lives and noncooperative price taking in large dynamic markets. Discussions focus on noncooperative equilibria which support the monopoly allocation, alternative definition of perfect epsilon equilibrium, one period Cournot game, fixed demand case, and replication case. The book takes a look at noncooperative price taking in large dynamic markets, no surplus condition as a characterization of perfectly competitive equilibrium, perfect competition profit criterion, and the organization of economic activity. Topics include profits to individually improving welfare, structure of firms, competitive allocations, no surplus allocations, profits as rents, Walrasian and perfectly competitive equilibrium, and no surplus and core equivalence as alternative characterizations of perfectly competitive equilibrium. The manuscript ponders on Nash equilibria of market games and efficiency properties of strategic market games, as well as commodities agents' assignments, strategic markets, games proper, and full Cournot-Nash equilibria and finiteness and inefficiency. The selection is

a valuable source of data for researchers interested in noncooperative approaches to the theory of perfect competition
