sections to be made conveniently from the ground. To do this, curl the bucket, extend the dipstick and boom, and rest the bucket on the ground. Remove the bucket rod pivot pin from the bucket links. Block the bucket cylinder away from the dipstick so that the rod can be extended without interference. With the engine shut off, remove entrapped pressure by moving the control handles before disconnecting the hoses. Proceed with the test as outlined below.

3. Position the bucket and dipstick on the ground so that oil will not be forced from the cylinders when the hoses are disconnected.
4. Disconnect the bucket cylinder rod end hose and connect the CR3 and CR4 fittings as shown in Figure 19.

5. Disconnect the crowd cylinder piston end hose and connect the CR2 fitting as shown in the Insert, Figure 19.

NOTE: The CR1 Adapter in the test kit is not required for this connection.

6. Start the tractor and set the throttle at 1700 engine rpm. The test pressures are to be observed at 1700 rpm.
7. Actuate the lift cylinder to raise the dipstick and bucket from the ground and to allow the bucket to swing through its full arc.
8. Actuate the bucket cylinder until the air is purged from the lines.
