Composites for Electrified Roadway in Megacities Ali Aryo Bawono, 2022-01-03 This book describes the development of an innovative solution for electrified roadway pavements based on engineered cementitious composites which are exhibiting an extreme tensile strain capacity that is much higher than conventional concrete This enables the pavement to work without steel reinforcement and to embed a dynamic wireless power transfer technology for charging electric vehicles At first the book presents a modified performance driven design approach to improve the composites to achieve the optimum pavement design in terms of functional and structural performance It shows that the modified composites can be used to fulfil the safety and comfort factors without neglecting the characteristics of conventional ones Further 3D finite element and fluid dynamics models are used to analyse the pavement properties The validated models can predict the functional performance including skid resistance surface water drainage and noise In the remaining part of the thesis an environmentally friendly

photocatalytic function for pavement made of engineered cementitious composites is investigated In turn a multi criteria design analysis is proposed to identify the optimum functional performance of the pavements All in all this book reports on a comprehensive approach to design analyse and optimize engineered cementitious composites for electrified road pavement application A special emphasis is given on applications in Singapore and other tropical megacities *BRAIN BLOOMERS, VOLUME 5* Prof. (Dr.) Amitava Basu,Dr. Santanu Mallick,Dr. Amalendu Samanta,Prof. (Dr.) Mary Conway
