### Readings:

HBS Case Study: "Langer Lab"

Science article, "Day in a Top-Flight Lab"

Many, perhaps most, biotechnology companies are "spun out" from academic laboratories. Today's session will explore processes by which university science is commercialized. It will explore the organization of academic laboratories and the incentive structures facing university scientists when deciding whether to commercialize their research.

### Session objectives:

1. Please be prepared to summarize the organization of academic laboratories, and use this knowledge to summarize incentives and constraints facing professors surrounding technology commercialization processes.
2. By the end of the session, you should be able to recall rules and processes surrounding academic commercialization in the United States.
3. Please be prepared to think critically about the process of academic commercialization within the United States.

### Study questions:

1. What, in your mind, accounts for Langer's success as a scientist?

I think that Langer's success as a scientist is attributed to his tenacity, instincts to surround himself with likeminded people and institutions, focus on improving the world with the part that he had control over, and his uncanny understanding of the importance, impact, and influence of the intersection between scientific discovery/invention and business-science. By filing for patents early, before publishing provided Langer with the security and freedom to pursue his research without the fear of his works being stolen and/or a competitor beating him to the producing the final product (or similar).

2. Science is often labeled as either "basic research" (conducted in universities) or "applied research" (conducted in companies). How would you characterize Langer's research?

I would characterize Langer's research as "real-world and industrial approaches to applied basic research."

3. The case study makes frequent mention of Langer's laboratory or 'lab'.
  - a. What are the primary goals of the lab?

The primary goals of the Langer's lab were to develop interfaces of biotechnology and material science fields, specifically in the areas of controlled

Servis, M.D., 2017 Annotation Study Guide to Preventive Medical Care in Psychiatry A Case Approach is an indispensable companion to Preventive Medical Care in Psychiatry A Practical Guide for Clinicians Like the primary text the study guide was written by experts in the field many with dual training in psychiatry and medicine and it reflects the text s focus on clinical care for psychiatrists and other mental health care providers who work in outpatient mental health and integrated clinics It is critical that mental health providers and trainees learn how to prevent and detect common medical conditions in their patients who typically have higher rates of adverse health risk behaviors and may lack a primary care physician Through the deft use of clinical cases the study guide helps providers and trainees acquire the knowledge and skills necessary to view the patient holistically and improve outcomes The study guide s authors employ effective organizational strategies and pedagogic features to achieve these objectives The study guide s structure mirrors that of the primary text with eight multi chapter sections authored by a team of leading experts in the respective areas Chapter content is embodied in a series of clinical cases each of which is followed by several multiple choice questions allowing readers to test their knowledge of the material In the answer guide the correct answer to each question is presented along with an explanation and the corresponding page numbers from the primary text where more complete coverage can be found This cross referencing allows readers to contextualize the question and answer and provides them with the opportunity to consolidate their learning of important information The original cases are well written and compelling offering readers a level of detail and complexity that is both realistic and illustrative of key concepts in prevention assessment and treatment In all the study guide offers 93 cases and 290 multiple choice questions covering every chapter in the text In addition more than

50 tables and figures are included to summarize vital information and illustrate important ideas Mental health clinicians in practice or training will find Study Guide to Preventive Medical Care in Psychiatry A Case Approach an essential evidence based tool for learning and translating a holistic integrated model of care into the clinical arena Informing with the Case Method T. Grandon Gill, 2011 There are a number of marvelous books that address the topic of the case method If you are interested in facilitating cases you can look to the classic book Teaching and the Case Method by Louis Barnes C Roland Christensen and Abby Hansen 1994 The collection of essays on the subject Education for Judgment The Artistry of Discussion Leadership by C Roland Christensen David Garvin and Ann Sweet 1991 is a wonderful and inspiring read as well If your interest is case based research it would be nearly impossible to find a more authoritative source than Robert Yin s 2009 4th Edition Case Study Research Design and Methods which at last count has been cited nearly 29 000 times according to Google Scholar There is even a new entry to the field William Ellet s 2007 The Case Study Handbook How to Read Discuss and Write Persuasively about Cases that is specifically aimed at the student At first glance then the topic of case studies in education and research seems to be pretty well covered Do we really need another book on the subject I write this book believing the answer is yes While I have great affection for the classics there are a number of issues facing most business faculty not to mention faculty members from disciplines outside of business that these books simply do not address In writing this book my intention is to offer some thoughts on some of these Paradoxically these omissions arise from the very fact that the authors of the classics are undisputed masters of their craft Why this is a problem should become clear as I identify the three areas of focus for this book The first issue that I feel must be considered is using the case method with a novice audience Consider the following When I was enrolled in the MBA program at Harvard Business School HBS in the early 1980s the curriculum consisted of nearly 900 case discussion 15 per week and perhaps as many as 20 class periods given over to lecture style presentations When I teach a case method graduate course at my own institution on the other hand I am constrained to 11 case discussions a 12 week semester As it happens I am also the only course in the entire program that employs pedagogy reasonably faithful to the case method as it is normally defined The math is very simple By the last day of my semester my students have as much experience discussing cases as I did on Thursday afternoon of the first week of my two year MBA program at HBS With the exception of faculty teaching at those rare institutions that have chosen to widely adopt the case method the situation I face is commonplace The second concern that existing books raise for me is their tendency to focus on isolated topics Specifically case facilitation case writing and case research are treated as separable activities I would argue that these three aspects of the case method which I define quite broadly are inseparable For institutions that wish to achieve the full set of benefits provided by the case method all three activities must be pursued in parallel Perhaps this is why so few institutions have achieved success through the case method In this book I will argue that achieving such integration is precisely why those rare institutions have been so successful Once you start believing that the case method can be a key to

institutional success how you get there becomes a real challenge At leading institutions featuring the case method such as HBS the philosophy is largely learned through a period of apprenticeship For example I did not encounter any of the references mentioned in the first paragraph excepting Yin at any time during my 5 year doctorate at HBS Instead I went out and wrote cases facilitated discussions and did research under the guidance of faculty members who were masters of the craft How can someone without the benefit of such an experience acquire such mastery While I cannot offer any promises in this regard I will at least provide some examples and easy to follow checklists that may be of service to individuals getting started
