

Basis for healthcare ethics

Developing ideal guiding standards of healthcare is a challenging task. There are several alternative perspectives. The standards of 'principlism' are common in the sense that healthcare delivery is based on four principles including justice, non-maleficence autonomy, and beneficence (Gert, 2004).

Modern worldly bioethics base on autonomy as the superseding value, although many other critics indicate the impracticality and risks in this approach. Specifically, the likely outcomes of the approach of autonomy are the tendency towards a market representation of healthcare structure, a condition that contradicts the conventional principles of medicine (Beauchamp, & Walters, 1999). Besides, it contradicts the facts of life for sufferers of chronic and disabling illnesses, or who are wholly reliant on others for their routine necessities.

Determining who gets what is the core concern for medical ethics. In circumstances of limited healthcare resources, allocation of resources will be based on need, or paying ability, or prospect for profitable productivity, or other certain criteria. The question of who determines patient's treatment is also important, wherein whether or not the patient's treatment be decided by the physician or the managers or other relevant persons (Grinnell, 2004, p. 1213).

Also, whether or not every person has the right of access to healthcare services poses a challenge for the policy makers (Hope, 2004). For instance; should criminals or heavy smokers have right to receive transplants even when they are scarce. Moreover, a question whether or not cosmetic surgery should be supported with public funds emerges.

Healthcare as a right for every person implicate that people have unlimited access to it, that healthcare ought to be funded through taxes. Another factor that establishment of healthcare ethics considers whether means-tested healthcare ought to or not be provided. A question of imposing health care insurance and at what define income level, on all healthcare consumers is as well challenging.

The aforementioned ethical questions vary amongst different countries and states in countries, and is a complex process altogether. Noteworthy, the supposition and values underpinning fiscal and management choices should be identified and analyzed.

Legal and Healthcare Ethics for the Elderly
George P. Smith II, 2022-04-18

Increasingly legislators at the state and federal levels of government are forced to evaluate and act upon the unique problems presented by an aging American public. A domino effect has occurred evoking concern in educational circles to deal with the varied complex issues associated with the new gerontology. This expanded focus brings in not only mental and public health delivery issues but reaches and impacts on the social sciences, ethics, law and medicine as well as public policy. In response to these matters *Legal and Healthcare Ethics for the Elderly* provides a balanced analytical presentation of the complicated socio legal, medico ethical and political perspectives which interact with gerontology as a field of study. In a straightforward and unambiguous style it covers information on access and financing healthcare, the ethics of rationing healthcare and the inevitable link to the quality of life, guardianship issues in a nursing home setting, informed consent, living wills and durable powers of attorney, elder abuse and death with dignity. The economics of care giving is charted and directed by the sometimes harsh realities of the marketplace. Thus the various philosophical and ethical dilemmas which confront the process of aging are examined here both from a micro and from a macro economic perspective. This book exemplifies that it is vitally important to be educated now to be prepared for the future and thereby make informed decisions for both ourselves and our loved ones.

The Cartwright Papers Joanna Manning, 2009

The Cervical Cancer Inquiry and its report known as the Cartwright Report were momentous events in the recent history of New Zealand. Critical issues were at stake: matters of life and death, the life's work of leaders within the medical profession, professional reputations, public trust in the profession and its own sense of self worth. After seven months of considering evidence, Judge Silvia Cartwright, assisted by expert medical and legal teams and drawing on specialist opinion from all over the world, concluded that Associate Professor Herbert Green had been conducting unethical research at National Women's Hospital and that many women had been affected. This book of essays recounts some of this history. Several of the contributors were participants. Clare Matheson writes as one of the patients. Professor Charlotte Paul was a medical adviser to the Inquiry. Sandra Coney with Phillida Bunkle wrote the article leading to the Inquiry. Dr Ron Jones was one of the three authors of the 1984 article using data from Green's own patients that demonstrated that carcinoma of the cervix had a significant invasive potential. Other authors are specialists in other fields. Professor Alastair Campbell and Associate Professor Joanna Manning comment from the perspective of medical ethics and medical law respectively. Ron Paterson is the Health and Disability Commissioner.

Jan Crosthwaite is a philosopher with expertise in medical ethics. These essays not only review the history but also document how the Cartwright Report changed the whole landscape of medical practice and biomedical research in this country leading to far better protections for both patients and research participants. Yet despite all the regulatory changes the most significant change to which the Cartwright Report contributed was attitudinal: a rejection of medical paternalism and a new expectation that patients would be treated as partners in their care. The findings of the Report remain controversial and continue to be debated to this day. This book provides a perspective on the current debates and helps place them in context. As Clare Matheson, one of Green's patients, said: 'We must never forget lest it happen again.' Contributors include Alastair Campbell, Silvia Cartwright, Sandra Coney, Jan Crosthwaite, Ron Jones, Joanna Manning, Clare Matheson, Ron Paterson, Charlotte Paul.

The wide-ranging contents and the standing of the contributors mean that the volume will be an invaluable resource for anyone studying or working in medical law or medical ethics.

Machine Medical Ethics Simon Peter van Rysewyk, Matthijs Pontier, 2014-09-05. The essays in this book, written by researchers from both humanities and science, describe various theoretical and experimental approaches to adding medical ethics to a machine: what design features are necessary in order to achieve this? Philosophical and practical questions concerning justice, rights, decision making and responsibility in medical contexts, and accurately modeling essential physician-machine-patient relationships. In medical settings, machines are in close proximity with human beings: with patients who are in vulnerable states of health, who have disabilities of various kinds, with the very young or very old, and with medical professionals. Machines in these contexts are undertaking important medical tasks that require emotional sensitivity, knowledge of medical codes, human dignity and privacy. As machine technology advances, ethical concerns become more urgent: should medical machines be programmed to follow a code of medical ethics? What theory or theories should constrain medical machine conduct? What design features are required? Should machines share responsibility with humans for the ethical consequences of medical actions? How ought clinical relationships involving machines to be modeled? Is a capacity for empathy and emotion detection necessary? What about consciousness? This collection is the first book that addresses these 21st-century concerns.

International ethical guidelines for health-related research involving humans Council for International Organizations of Medical Sciences (CIOMS), 2016-12-06. Progress towards a world where all can enjoy optimal health and health care is crucially dependent on all kinds of research, including research involving humans. Involving humans in medical research is necessary to improve the knowledge base on which medicine should be based. At the same time, individuals participating in health-related research have individual human rights and have

a right to be protected against the risks that research may bring to them The tension between these two considerations has led the medical community to endorse ethical guidelines for health related research Research Ethics Committees can use these guidelines to evaluate whether a given research protocol is ethically acceptable or not CIOMS in association with the World Health Organization started its work on ethics in health related research in the late 1970s Accordingly CIOMS set out in cooperation with WHO to prepare guidelines to indicate how the ethical principles set forth in the Declaration of Helsinki of the World Medical Association could be effectively applied particularly in low resource settings given their socio economic circumstances laws and regulations and executive and administrative arrangements Since then revised editions of the CIOMS ethical guidelines were published in 1993 and 2002 New developments in research have prompted CIOMS to again revise their ethical guidelines The result is now available in this new publication In the new 2016 version of the ethical Guidelines CIOMS provides answers to a number of pressing issues in research ethics The Council does so by stressing the need for research having scientific and social value by providing special guidelines for health related research in low resource settings by detailing the provisions for involving vulnerable groups in research and for describing under what conditions biological samples and health related data can be used for research In providing this new version CIOMS hopes to ensure that the ethical Guidelines remain a living document that provides reasoned conditions for research in order to meet the challenges of modern research <https://doi.org/10.56759/rgxl17405> Ethical and Legal Issues in Canadian Nursing - E-Book Margaret Keatings, Pamela Adams, 2023-08-25 UPDATED Thoroughly revised and expanded coverage of top of mind ethical and legal topics concerning vulnerable populations Indigenous Joyce Echaquan Inquiry refugees and LGBTQ2 persons advancing technologies and telemedicine evolving scopes of practice of various categories of nurses Medical Assistance in Dying MAiD and much more NEW Coverage of Indigenous legal and ethical perspectives and ways of knowing and understanding related to health health care and decision making NEW Up to date information on legal and ethical challenges in the time of SARS CoV 2 NEW Case studies for the Next Generation NCLEX on the companion Evolve website Ethical Function in Hospital Ethics Committees Guy Lebeer, 2002 This monograph was written to present the results of the concerted action called Ethical Function in Hospital Ethics Committees funded by the European Union in the context of the BIOMED II programme Ethics committees as a principle national clinical or for research do appear as quite innovative in the hospital environment They offer an opportunity deep in the clinical practice to think about wide and subtle issues of medicine throughout a variety of discourses coming from philosophy social sciences law and laymen as well **Public Health Papers and Reports** American Public Health Association, 1908 List of members in v 5 6 9 11 33 **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70
