The Biology of Sea Turtles, Volume I Peter L. Lutz, John A. Musick, 2017-12-06 Sea turtles have existed for millions of years making them fascinating subjects of study In the last 20 years the science of sea turtle biology has expanded at an exponential rate leading to major advances in many areas This book synthesizes the results of these advances and focuses on how these endangered marine reptiles operate in adapt to and are dependent upon particular features of their marine environment New technology in data gathering such as DNA analyses remote sensing and physiological monitoring techniques has led to a much greater understanding of the biology of the sea turtle at all stages of their life history

Cumulated Index Medicus, 1989 Fibrous Proteins: Muscle and Molecular Motors John M. Squire, David A.D. Parry, 2005-08-29 Molecular Motors and Muscle is the second of a three part series on Fibrous Proteins The books are based on a very successful workshop in Alpbach Austria on the general topic of Fibrous Proteins that gave rise to the award winning issue of Journal of Structural Biology There are two major types of protein Globular proteins which are often enzymes which speed up biochemical reactions and Fibrous proteins which often have more structural roles but can also have dynamic properties Fibrous proteins are usually either elongated molecules which pack together to form long filaments as in the case of the intermediate filaments in our hair and skin and as in collagen fibrils in tendons and bones or they are globular proteins which aggregate linearly to form long filaments such as actin filaments or microtubules Fibrous proteins act as molecular scaffolds in cells they can be involved in transport of cell organelles or even on a visible scale as in our muscles They provide the supporting structures of our skeletons bones tendons cartilage and skin They define the mechanical properties of our internal hollow organs such as the intestines heart and blood vessels They are vital for life and represent a fascinating subset of the proteome Advances in Protein Chemistry is available online on ScienceDirect full text online of volumes 53 onwards Elsevier book series on ScienceDirect gives multiple users throughout an institution simultaneous online access to an important compliment to primary research Digital delivery ensures users reliable 24 hour access to the latest peer reviewed content The Elsevier book series are compiled and written by the most highly regarded authors in their fields and are selected from across the globe using Elsevier's extensive researcher network For more information about the Elsevier Book Series on ScienceDirect Program please visit <http://www.info.sciencedirect.com>

Zhao,2009-12-18 Volume 2 of the two volume set Advanced direct injection combustion engine technologies and development investigates diesel DI combustion engines which despite their commercial success are facing ever more stringent emission legislation worldwide Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications Two exclusive sections examine light duty and heavy duty diesel engines Fuel injection systems and after treatment systems for DI diesel engines are discussed The final section addresses exhaust emission control strategies including combustion diagnostics and modelling drawing on reputable diesel combustion system research and development Investigates how HSDI and DI engines can meet ever more stringent emission legislation Examines technologies for both light duty and heavy duty diesel engines Discusses exhaust emission control strategies combustion diagnostics and modelling Muscle Contraction and Cell

Motility H. Sugi,2012-12-06 This volume intends to provide a comprehensive overview on the mechanisms of muscle contraction and non muscle cell motility at the molecular and cellular level not only for investigators in these fields but also for general readers interested in these topics A most attractive feature of various living organisms in the animal and plant kingdoms is their ability to move In spite of a great diversity in the structure and function of various motile systems it has frequently been assumed since the nineteenth century that all kinds of motility are essentially the same Based on this assumption some investigators in the nineteenth century thought that the mechanisms of motility could better be studied on primitive non muscle motile systems such as amoeboid movement rather than on highly specialized muscle cells Contrary to their expectation however the basic mechanisms of motility have been revealed solely by investigations on vertebrate skeletal muscles since a monumental discovery of Szent Gyorgyi and his coworkers in the early 1940s that muscle contraction results from the interaction between two different contractile proteins actin and myosin coupled with ATP hydrolysis **Sports**
