

How an Air Conditioner Works:

Similar to how a refrigerator works, air conditioners transfer heat from a home's interior to the warm outside environment.

(A) Evaporator

Cooling coils remove heat and humidity from the air using refrigerant.

(B) Blower

A blower (or fan) circulates air over the evaporator, dispersing the chilled air.

(C) Condenser

Hot coils release the collected heat into the outside air.

(D) Compressor

A pump that moves refrigerant between the evaporator and the condenser to chill the indoor air.

(E) Fan

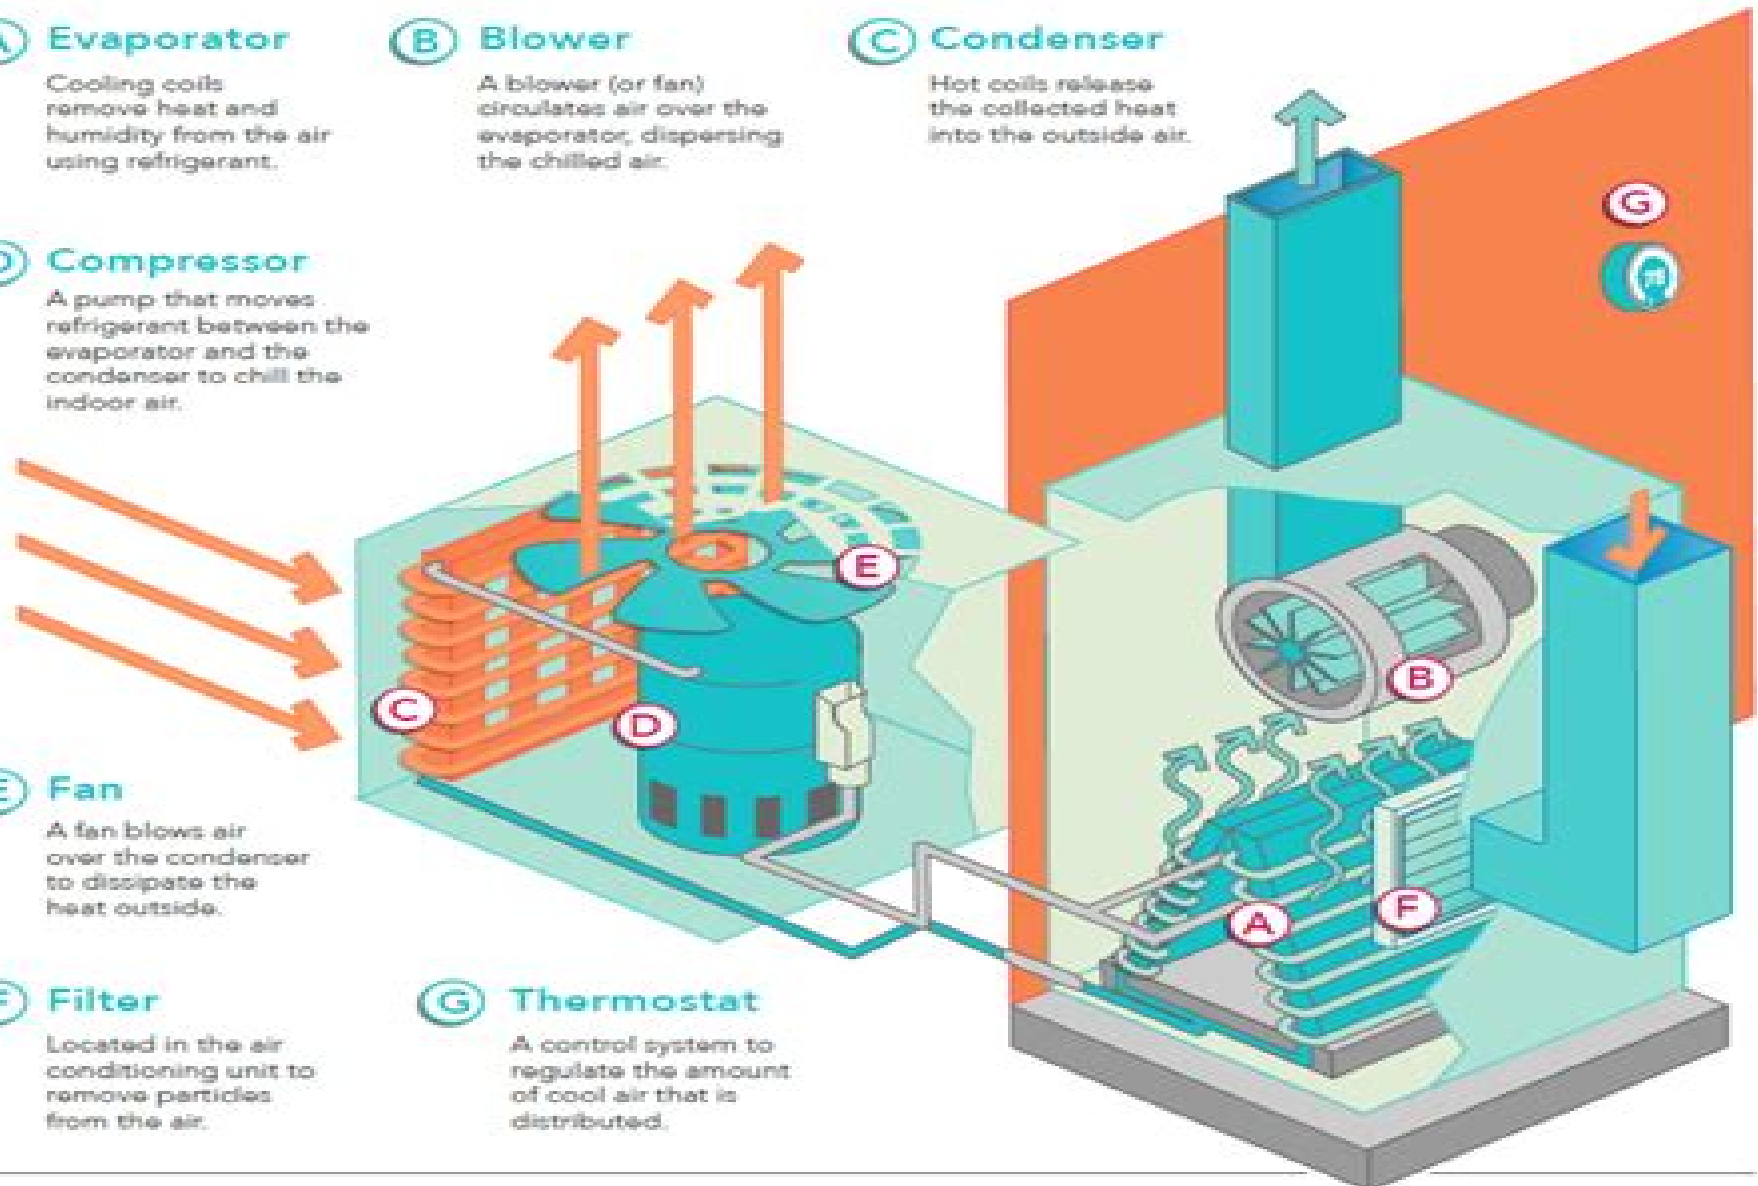

A fan blows air over the condenser to dissipate the heat outside.

(F) Filter

Located in the air conditioning unit to remove particles from the air.

(G) Thermostat

A control system to regulate the amount of cool air that is distributed.

Exergy Analysis of the Air Handling Unit at Variable Reference Temperature Vytautas Martinaitis, Giedrė Streckienė, Juozas Bielskus, 2022-03-25 This book explores how exergy analysis can be an important tool for assessing the sustainability of buildings. Buildings account for around 40 percent of total energy conditions depending on local climatic conditions. Due to its nature, exergy analysis should become a valuable tool for the assessment of building sustainability, first of all considering their scope and the dependence of their energy demands on the local environmental and climatic conditions. Nonetheless, methodological bottlenecks do exist, and a solution to some of them is proposed in this monograph. First and foremost, there is the still missing thermodynamically viable method to apply the variable reference environment temperature in exergy analysis. The monograph demonstrates that a correct approach to the directions of heat exergy flows when the reference temperature is considered variable allows reflecting the specifics of energy transformation processes in heating, ventilation, and air conditioning systems in a thermodynamically viable way. The outcome of the case analysis, which involved coordinated application of methodologies based on the Carnot factor and coenthalpies, was exergy analysis indicators: exergy efficiency and exergy destroyed, obtained for air handling units and their components. These methods can be used for the purposes of analysing and improving building technical systems that, as a rule, operate at a variable environment temperature. Exergy analysis becomes more reliable in designing dynamic models of such systems and their exergy-based control algorithms. This would improve the possibility to deploy them in building information modelling (BIM) technologies and the application of life cycle analysis (LCA) principles in designing buildings, thus improving the quality of the decision-making process. Furthermore, this would benefit other systems where variable reference environment plays a key role. This book is relevant to academics, students, and researchers in the field of thermodynamic analysis, considering HVAC equipment, building energy systems, energy efficiency, sustainable development of technical systems of energy, mechanics, and construction, as well as preservation of natural resources. Planners, designers, engineers of HVAC equipment, building energy systems, and developers of appropriate simulation tools, e.g. BIM, will also find it of use.

Reconstructing Organization Damian P. O'Doherty, 2016-12-27 This unique book breaks original ground in management and organization studies by drawing on over 21 years of ethnographic study in a major UK international airport group. Much has been written about the McDonaldisation or Disneyization of society, but few have been attentive to what the author terms 'loungeification' of society. A minor mode of organization, but one whose effects are likely to become ever more profound, this study shows how management and organization is itself being reconstructed and reshaped by way of loungeification. Drawing on critical management studies, actor network theory, and debates in contemporary anthropology around the so-called ontological turn, *Reconstructing Organization* enacts a veritable experiment in business and management studies. Who are these coming loungers? What do they want? Can we manage them? Or will they soon capture us with their talking chairs and crinicultural
