Modern Technologies and Their Influence in Fermentation Quality Santiago Benito, 2020-05-20 During the last few years industrial fermentation technologies have advanced in order to improve the quality of the final product Some examples of those modern technologies are the biotechnology developments of microbial materials such as *Saccharomyces* and non *Saccharomyces* yeasts or lactic bacteria from different genera Other technologies are related to the use of additives and adjuvants such as nutrients enzymes fining agents or preservatives and their management which directly influence the quality and reduce the risks in final fermentation products Other technologies are based on the management of thermal treatments filtrations pressure applications ultrasounds UV and so on which have also led to improvements in fermentation quality in recent years The aim of the issue is to study new technologies able to improve the quality parameters of fermentation products such as aroma color turbidity acidity or any other parameters related to improving sensory perception by the consumers Food safety parameters are also included

Advances in Lignocellulosic Biofuel Production Systems Preshanthan Moodley, Ramesh C. Ray, Evariste B. Gueguim Kana, 2023-04-27 Advances in Lignocellulosic Biofuel Production Systems focuses on general topics such as novel pretreatment strategies lignocellulosic biomass as a suitable feedstock for biofuels lifecycle assessment and integrated biorefineries Furthermore the book focuses on more advanced topics such as genetically engineered feedstocks metabolically engineered microbes bioreactor design and configuration cell immobilization strategies artificial intelligence applications and nanotechnology This book will guide readers through all aspects of lignocellulosic biofuel production rather than simply covering a single topic Provides information on the most advanced and innovative technologies for biomass valorization including the design and configuration of bioreactors Identifies research gaps in the application of artificial intelligence nanotechnology cell immobilization metabolic engineering kinetic assessment and genetically engineered feedstocks for enhancing lignocellulosic bioprocessing and biofuel yield Presents a global overview of the supply chain for biofuels production from lignocellulosic biomass Includes techno economic analysis along with environmental and socioeconomic impact assessments of various technologies

Natural Polymers and Biopolymers II Sylvain Caillol, 2021-05-05 BioPolymers could be either natural polymers polymer naturally occurring in Nature such as cellulose or starch or biobased polymers that are

artificially synthesized from natural resources Since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources One solution consists in the use of sustainable resources instead of fossil based resources Hence biomass feedstocks are a promising resource and biopolymers are one of the most dynamic polymer area Additionally biodegradability is a special functionality conferred to a material bio based or not Very recently facing the awareness of the volumes of plastic wastes biodegradable polymers are gaining increasing attention from the market and industrial community This special issue of Molecules deals with the current scientific and industrial challenges of Natural and Biobased Polymers through the access of new biobased monomers improved thermo mechanical properties and by substitution of harmful substances This themed issue can be considered as collection of highlights within the field of Natural Polymers and Biobased Polymers which clearly demonstrate the increased interest in this field We hope that this will inspire researchers to further develop this area and thus contribute to futures more sustainable society
