Biospheres Collide: A History of NASA's Planetary Protection Programs Michael Meltzer, 2012-01-27 PRINT FORMAT ONLY NOTE NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE Significantly reduced list price This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth Namely how do we avoid contaminating celestial bodies with Earthly germs when we send spacecraft to study these bodies and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth Biological matter from an external system could potentially cause an unchecked epidemic either on Earth or in space so strict precautions are necessary Each time a space vehicle visits another world it runs the risk of forever changing that extraterrestrial environment We are surrounded on

Earth by a m lrange of different microorganisms and if some of these hitchhike onboard a space mission they could contaminate and start colonies on a different planet Such an occurrence would irrevocably alter the nature of that world compromise all future scientific exploration of the body and possibly damage any extant life on it By inadvertently carrying exotic organisms back to Earth on our spacecraft we also risk the release of biohazardous materials into our own ecosystem Such concerns were recognized by scientists even before the 1957 launch of Sputnik This book presents the history of planetary protection by tracing the responses to the above concerns on NASA s missions to the Moon Mars Venus Jupiter Saturn and many smaller bodies of our solar system The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own To protect irreplaceable environments NASA has committed to conducting space exploration in a manner that is protective of the bodies visited as well as of our own planet [Cloud Computing for Scientific Research](#) Jie

Nonfiction Book Awards Societies are vulnerable to any number of potential disasters earthquakes hurricanes infectious diseases terrorist attacks and many others Even though the dangers are often clear there is a persistent pattern of inadequate preparation and a failure to learn from experience Before disasters institutions pay insufficient attention to risk in the aftermath even when the lack of preparation led to a flawed response the focus shifts to patching holes instead of addressing the underlying problems Examining twenty years of disasters from 9 11 to COVID 19 Jeff Schlegelmilch and Ellen Carlin show how flawed incentive structures make the world more vulnerable when catastrophe strikes They explore how governments the private sector nonprofits and academia behave before during and after crises arguing that standard operational and business models have produced dysfunction Catastrophic Incentives reveals troubling patterns about what does and does not matter to the institutions that are responsible for dealing with disasters The short termism of electoral politics and corporate decision making the funding structure of nonprofits and the institutional dynamics shaping academic research have all contributed to a failure to build resilience Offering a comprehensive and incisive look at disaster governance Catastrophic Incentives provides timely recommendations for reimagining systems and institutions so that they are better equipped to manage twenty first century threats [Making Education Work for the Poor](#) William Elliott, Melinda Lewis,2018-07-03 Making Education Work for the Poor identifies wealth inequality as the gravest threat to the endangered American Dream Though studies have clearly illustrated that education is the primary path to upward mobility today educational outcomes are more directly determined by wealth than innate ability and exerted effort This accounting directly
