Prevention and Control for the Municipal Water Cycle in a River Basin Context Alberto Galvis-Castaño, 2019-08-14

The protection of water resources from deterioration in quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades In practice most countries have adopted pollution control strategies and measures which are based on end of pipe solutions wastewater treatment plants and adjustments to the regulations including taxes for wastewater discharges Conventional Strategy Although this approach involves very high costs on many occasions this strategy has been a complete failure The research described in this book contribute to the development of sustainable solutions for the previously outlined problem It was based on the validation of the Three Step Strategic Approach concept 3 SSA which includes 1 prevention or minimisation of waste production 2 treatment aimed at recovery and reuse of waste components and 3 disposal of remaining waste with stimulation of natural self purification of the receiving water body The study showed overall positive effects of the 3 SSA in comparison of Conventional Strategy on wastewater management in the Upper Basin 389 km of the Cauca river the second most important river in Colombia The Cost Benefit Analysis clearly favoured the 3 SSA generating a major impact on the river water quality at lower cost compared to the Conventional Strategy **Fisicoquímica y microbiología de los medios acuáticos** Marín Galván,

Rafael, 2019-01-01 El estudio del agua su control de calidad así como su tratamiento y depuración es sin duda una parcela pujante en la sociedad actual con notable cantidad de técnicos ocupados en la misma Se antoja pues interesante contar con obras que conjunten aspectos de sesgo más académico tales como los relativos a fenómenos fisicoquímicos y microbiológicos y microorganismos acuáticos tanto en aguas naturales como modificadas por el hombre con otros más técnicos relacionados con el tratamiento y depuración industrial de aguas y a su vez con aquellos que fundamenten la aplicación de las normativas aplicables al sector y no necesariamente dirigidos a especialistas Todo lo dicho intenta conjugarse en este libro que recoge en sus tres primeros capítulos una visión sistemática sobre la dinámica fisicoquímica y microbiológica natural de las aguas desarrollando los mecanismos que determinan la presencia y la concentración final de especies químicas y microorganismos en los medios acuáticos con o sin la posibilidad de alteración de su estado original por causas naturales o antropogénicas En el capítulo cuarto se recogen las bases de los procesos usuales de tratamiento y depuración industrial de aguas reseñando primero los principios fisicoquímicos y microbiológicos de los procesos unitarios aplicados y después su traslado a la práctica a escala

industrial El quinto capítulo realiza una exposición actualizada de las normativas sectoriales más relevantes españolas ya europeas de obligado cumplimiento para aguas naturales de consumo humano residuales regeneradas y aguas de piscinas resaltando sus puntos más relevantes El capítulo sexto presenta una aproximación a la problemática de los contaminantes emergentes verdadera fuente de preocupación en el mundo actual seguido de un capítulo séptimo recopilando las técnicas aplicables en control físicoquímico microbiológico virológico y radiológico de aguas con especial atención a las consideradas como modelos de referencia Finaliza esta obra con la reseña bibliográfica capítulo octavo nacional e internacional más reseña sobre aguas incluyendo revistas imprescindibles para todos los interesados en este apasionante campo Fisicoquímica de aguas

insustituibles ensayos de tratamiento a escala de laboratorio así como una colección de problemas resueltos de dosificación de reactivos y similares y de hidrúlica básica que son habituales en tratamiento de aguas y que no por su simplicidad dejan de plantear serias dudas en muchas ocasiones como indica la rutina diaria Como final se ha estructurado un Capítulo exhaustivo de Bibliografía con los principales libros de consulta sobre fisicoquímica y química de aguas microbiología biología y limnología a tratamiento y depuración de aguas residuales y tratamiento de aguas en general finalizando con una relación actualizada de revistas del sector *Química básica para ingenieros* Joaquín Coronas Ceresuela, 2013
