Assessing Bacterial Growth Potential in Seawater Reverse Osmosis Pretreatment Almotasembellah

Abushaban,2020-01-21 Seawater desalination is increasingly being used as a means to augment freshwater supplies in regions with high water stress and reverse osmosis is increasingly the technology of choice because of the low energy consumption However seawater reverse osmosis SWRO systems suffer from various types of fouling which can increase energy consumption and the use of chemicals during SWRO operation In practice pre treatment systems are put in place to reduce the particulate and biological fouling potential of SWRO feed water However simple reliable and accurate methods to assess the extent to which biological fouling potential is reduced during pre treatment are not available for seawater This research developed a new method to measure bacterial growth potential BGP using the native bacterial consortium in seawater New reagents to extract and detect ATP in microbial cells were specifically developed for seawater The new lysis and detection reagents overcame the salt interference in seawater and allow low detection of total ATP free ATP and microbial ATP in seawater Incorporating a filtration step further increased the sensitivity of the method six fold enabling ATP detection of ultra low levels of microbial ATP in seawater The newly developed ATP based BGP method was applied to monitor and assess the pre treatment of five full scale seawater desalination plants around the world A good correlation was observed between BGP measured in SWRO feed water and the pressure drop increase in the SWRO systems suggesting the applicability of using the ATP based BGP method as a biofouling indicator in SWRO Furthermore a safe level of BGP In the future on line monitoring of BGP in SWRO feed water may further reduce the consumption of chemicals and energy and improve the overall sustainability of seawater desalination by reverse osmosis Chemical Economy & Engineering Review ,1981 **Government Reports Index** ,1970 Potential of Low-Medium Enthalpy Geothermal Energy Elisabet Palomo,Antonio Colmenar-Santos,Enrique Rosales-Asensio,2022-02-11 This book highlights the importance of geothermal energy by studying its potential either alone or in combination with solar energy focusing on its industrial application Its starting point is to identify in a thorough and precise manner the barriers that hinder the implementation of geothermal energy in Spain and the European Union and the measures to be taken to achieve its diffusion and regular use Next the book looks at how geothermal energy could contribute to this sector and to the desalination industry in particular analysing a specific case in the south of Spain and extrapolating its results to a set of existing desalination plants in the Spanish Mediterranean with really interesting results in terms of economic amortisation and CO2 emissions avoided to the atmosphere Beyond the desalination industry this work demonstrates that almost 85% of the industrial processes of all industry in Spain can be carried out with very low low and medium temperature geothermal resources and even applies its results to a set of existing solar plants comparing in economic terms the results already obtained with those that would have been obtained if geothermal energy had been applied Meteorology and Oceanography of the Middle East ,1991 **U.S. Government Research & Development Reports** ,1970 **Bibliography of Scientific and Industrial Reports** ,1971 **Solar Energy Engineering** Soteris A Kalogirou,2023-12-01 Solar Energy Engineering Processes and Systems Third

Desalination Research Progress Daniel J. Delgado, Pablo Moreno, 2008. As freshwater resources continue to decline as the population grows and development activities continue, desalination has taken on a sense of urgency. Desalination refers to any of several processes that remove excess salt and other minerals from water. Desalination may also refer to the removal of salts and minerals more generally, as in soil desalination. This book includes within its scope distillation, membranes, reverse osmosis, electrodialysis, ion exchange, freezing, water purification, and water reuse and wastewater treatment. This new volume examines new research in this frontier field.

Application and Behavior of Nanomaterials in Water Treatment Protima Rauwel, Erwan Rauwel, Wolfgang Uhl, 2019-08-27. The book compiles scientific articles describing advances in nanomaterial synthesis and their application in water remediation. The publications treat diverse problems such as dye degradation, heavy metal ion, as well as radioactive element capture and sequestration. There are 10 original research articles and one review article. The latter proposes graphene, CNT, and Prussian blue nanocomposites for radioactive 137.

cesium extraction from aqueous media All reports thoroughly characterize the nanomaterials post synthesis and describe their catalytic photocatalytic or ion exchange activities in contaminated water The dyes studied in the collection are azo dyes i e methylene blue and orange rhodamine B phenolic dyes viz bromophenol blue and other dyes with sulfonyl groups Extraction of radioactive elements including cationic ^{137}Cs and anionic ^{125}I is also investigated The omnipresence of ZnO nanoparticles in everyday products and their effects in wastewater are also evaluated Layered double hydroxide are capable of capturing Ag ions which then has a catalytic effect on dye degradation The nanomaterials considered are varied viz graphene CNT Prussian blue nanoporous carbon layered double hydroxides magnetite ferrites organic powders polymer membranes bacteria and inorganic nanomaterials such as MnO and Ag The book targets an interdisciplinary readership
