

Name: _____

Mudpuppy Internal Dissection

The mudpuppy's mouth is large and bounded by lips. The **lidless** eyes are small, as are the widely separated nares, which communicate with the oral cavity (see below). A short neck is present between the head and the long trunk. Notice the lack of tympanic membranes since mudpuppies are found in an aquatic environment and rarely make noise, there is no need for a well developed ear (tympanic membrane) like in frogs and toads. They are more similar to fish and use a lateral line for detecting changes. A **lateral line system** is present, but is not obvious as in fish.

Posteriorly, the large, flattened tail bears a small, marginal fin, which, however, lacks the supporting rays present in fishes.

Paired pectoral and pelvic limbs are small, but bear the three segments typical of terrestrial tetrapods. The cloaca, marking the posterior end of the trunk, lies ventrally between the pelvic limbs. **In males the cloacal aperture is surrounded by small projections or papillae.** The region around the cloaca is swollen due to the presence of the cloacal gland in mature males. Lastly, note the smooth, scaleless skin, which has an important respiratory function.

Once you have successfully located all that was required below and you are comfortable with identifying these organs if asked or quizzed...on Wednesday, you may explore further – some ideas...

- *Brain cavity*
- *Eyes – do they have the same “red” hard ball that makes up the eyes like frogs?*
- *How gills connect to the heart*
- *Anything else you would like to explore...*
- *If your stomachs seem “full” cut it open...*

Mudpuppy Dissection Guide

Daniela Niemeyer

Mudpuppy Dissection Guide:

Immerse yourself in the artistry of words with is expressive creation, **Mudpuppy Dissection Guide** . This ebook, presented in a PDF format (Download in PDF: *), is a masterpiece that goes beyond conventional storytelling. Indulge your senses in prose, poetry, and knowledge.
