Collateral Damage Sharon L. Nichols, David C. Berliner, 2007-03-01 Drawing on their extensive research Nichols and Berliner document and categorize the ways that high stakes testing threatens the purposes and ideals of the American education system For more than a decade the debate over high stakes testing has dominated the field of education This passionate and provocative book provides a fresh perspective on the issue and powerful ammunition for opponents of high stakes tests Their analysis is grounded in the application of Campbell's Law which posits that the greater the social consequences associated with a quantitative indicator such as test scores the more likely it is that the indicator itself will become corrupted and the more likely it is that the use of the indicator will corrupt the social processes it was intended to monitor Nichols and Berliner illustrate both aspects of this corruption showing how the pressures of high stakes testing erode the validity of test scores and distort the integrity of the education system Their analysis provides a coherent and comprehensive intellectual framework for the wide ranging arguments against high stakes testing while putting a compelling human face on the data marshalled in support of those arguments

English Teaching Forum ,1970 *Teaching and Learning in History* Ola Hallden,2012-10-12 Research on history instruction and learning is emerging as an exciting new field of inquiry The editors prepared this volume because the field is at an important moment in its development a stage where there is research of sufficient depth and breadth to warrant a collection of representative pieces The field of research on history teaching and learning connects with both traditional research on social studies and with recent cognitive analyses of domains such as mathematics and physics However the newer research goes beyond these activities as well Where traditional research approaches to social studies instruction and learning have focused on curriculum they have avoided the study of purely disciplinary features the textual components of history and the concomitant demands as well as the nature of various learners Where recent cognitive analyses of mathematics and physics have dealt with misconceptions and knowledge construction they have avoided topics such as perspective taking interpretation and rhetorical layerings The new work by contrast has been concerned with these issues as well as the careful analyses of the nature of historical tasks and the nature of disciplinary and instructional explanations The lines of research presented in these chapters are both compelling and diverse and include a range of topical questions such as What affects the quality of teaching How are historical documents interpreted in the writing of history How is history explained What are the classroom demands on an elementary school social studies teacher What does text accomplish or fail to accomplish in educational settings How do teachers think about particular topics for history teaching Although much of the research reflects a grounding in or the influence of cognitive psychology not all of it derives from that tradition Traditions of rhetoric curriculum analysis and developmental psychology are also woven throughout the chapters The editors envision this volume as a contribution to educational research in a subject matter and as a tool for practitioners concerned with the improvement of instruction in history They also anticipate that it will contribute to cognitive science
