Endocrine Diseases of Newborn: Epidemiology, Pathogenesis, Therapeutic Option and Outcome Amanda Lesley Ogilvy-Stuart, Paula Caroline Midgley, 2021-11-10 Neurological and Psychiatric Disorders in Endocrine Diseases Gianluca Tamagno, Jacques Epelbaum, 2015-07-16 Neurological and psychiatric disorders can occur in endocrine diseases either in the setting of the clinical manifestations of the same (i.e., hyper or hyposecretion of hormones or peptides from the endocrine glands) or as events secondary to the pathogenetic mechanisms of the endocrinopathy (i.e., autoimmunity affecting endocrine glands and the brain). Also, the medical or surgical treatment of the endocrine disease can sometimes determine the occurrence of neurological or psychiatric abnormalities. Moreover, some genetic alterations can lead to syndromes affecting both the endocrine and the nervous system with a variety of possible manifestations. In the last couple of decades, a number of associations between dysfunctions of the endocrine system and neurological or psychiatric manifestations have appeared, and only in the minority of the cases this link has been fully elucidated. Often, the neurological or psychiatric alterations still represent a relevant challenge for clinicians with regard to the management of the patients. The complexity of the topic and the limited availability of laboratory research models for the study of the endocrine system-nervous system cross-interaction are making the scientific progresses intricate and sometimes slow. A dedicated focus to such broad and often still obscure topic might help and clarify the current state of the art in the field and direct the goals of future research. **Encyclopedia of Endocrine Diseases** Luciano Martini, 2004 The Encyclopedia of Endocrine Diseases is an authoritative reference developed by 16 international experts who recruited the world's top scientists for contributions.
