

Energy Transformations Study Guide

Learning Target #1

Describe how oceans affect climates

- a) Describe the salinity of ocean water
- b) Explain the cause and effect relationships between oceans and climate
- c) Identify what causes surface currents
- d) Explain how surface currents affect climate

Why is water a slow conductor of heat?

It needs to gain more energy for its temperature to increase

Why are our oceans important as a source of heat energy?

- The oceans cover more than 2/3 of the Earth's surface
- They absorb more sunlight and store more heat.
- Oceans retain heat longer
- Sun's rays heat up the ocean to the depths of many meters

Why can ocean water remain within a narrow range of temperatures as opposed to air temperatures?

It has a high heat capacity

Why do oceans have a major effect on climate?

They hold a large amount of heat energy

When you wake up before sunrise to go on a walk on the beach, what conditions would you expect?

The air over the water is hotter than the air over the land

What kind of temperatures would you look for if you expected to feel a sea breeze?

The sea temperature would be lower than the land temperature (chart of temperatures will be used on test)

After a hot, sunny day, the land cools faster than the sea. What is likely to happen after a hot, sunny day on the sea shore?

Cool air from the shore will travel to the sea

What is the relationship between heat absorption and heat loss in terms of ocean vs land?

Land absorbs and loses heat faster than sea water

Energy Transformation Study Guide
