Finding an Epicenter

An earthquake releases energy that travels through Earth in all directions. This energy is in the form of waves. Two kinds of seismic waves are P waves and S waves. P waves travel faster than S waves and are the first to be recorded at a seismograph station. The S waves arrive after the P waves. The time difference between the arrival of the P waves and the S waves increases as the waves travel farther from their origin. This difference in arrival time, called *lag time*, can be used to find the distance to the epicenter of the earthquake. Once the distance from three different locations is determined, scientists can find the approximate location of the epicenter.

OBJECTIVES

Using Scientific Methods Analyze P waves and S waves to determine the distance from a city to the epicenter of an earthquake.

Determine the location of an earthquake epicenter using the distance from three different cities to the epicenter of an earthquake.

MATERIALS

- calculator
- drawing compass
- ruler

PROCEDURE

1. The average speed of P waves is 6.1 km/s. The average speed of S waves is 4.1 km/s. Calculate the lag time between the arrival of P waves and S waves over a distance of 100 km.

about if when and how to end lives Or violence on the street or the devastation of a flood ravaged community What is it that we can learn from these situations I put an emphasis on learning because I do believe that if we don t learn every day if we don t learn every hour this work will destroy us It s important to use a word as strong as destroy There are reasons not everyone does this work and there are limits to how much of this work anyone can do What we must keep asking ourselves is Why do we do this work Why are we drawn to those who suffer What is it that s good about this And what not so good What is it that is admirable and something that we should show enormous compassion and respect to ourselves for And what is there in it that is self destructive that we should be constantly questioning and challenging To answer these questions we must get past the assumption that attending to the suffering is entirely saintly and noble or that it is a symptom of a deep perverse drive Much attention is rightly being focused on people who serve on healthcare s front lines The framework for these discussions tends most often to be the terms burnout and moral distress These terms certainly point to very real experiences very painful experiences Unfortunately they also often carry with them judgmental messages You are failing You must do better What I want to say to you here is that while these terms point to realities for those of us who have worked with suffering day in and day out they may not help us move and grow into the deeper ranges of compassion and recognition and attention that are possible unless we supplement them with other constructs and insights When I say that I want to encourage a conversation within you part of what I have in mind is this We are all multiple selves And one of the things that happens when we work with people and communities that are suffering and in pain physical pain psychological pain spiritual pain is that distinct pieces of ourselves often respond quite differently to what is going on in front of us Many different feelings are stirred We may be terrified and at the same time move with great compassion while being also completely exhausted and madly energized
