### *Some of the Animals Who Appear in the Movie*

Clownfish -- Nemo and Marlin belong to one of about 27 species of clownfish (*Amphiprion ocellaris*). Clownfish are small and often brightly colored. They belong to the damselfish family. They are 2 - 5 inches (5 - 12.5 cm) long. They live in tropical waters.

Clownfish are often sheltered by an anemone with whom they have a symbiotic relationship. In fact, most of the scientific literature refers to them as "anemone fish." Clownfish are not immune to the poison in the anemone's tentacles and at first appear to be stung by them. Scientists believe that by dancing up against the tentacles for a

time clownfish develop a protective mucous covering. Clownfish eat leftovers from fish consumed by the anemone as well as planktonic crustaceans and algae. Clownfish also eat the dead tentacles of their host anemone. Eggs are laid in large batches, usually near and sometimes within the host anemone. Clownfish are not eaten by man but their bright colors make them popular for saltwater aquariums. Divers

have damaged many reefs looking for prime specimens. Clownfish live in the tropical parts of the Pacific and Indian Oceans or where warm, tropical waters are carried by currents, such as the east coast of Japan.

Pacific Blue Tang -- Dorey's real life models (*Paracanthurus hepatus*) are members of the surgeonfish family. They were given this name because sharp, moveable spines on both sides of their tails were thought to resemble surgeons' scalpels. These spines are for defense. A fisherman trying to hold a blue tang can suffer a deep and painful wound if the fish tries to escape by giving a twist of its tail. The fish are blue with a yellow tail and a black stripe along the upper portion of their body. They live on zooplankton and can grow to be about 12
