Fields Medallists' Lectures, 2nd Edition Michael Atiyah, Daniel Iagolnitzer, 2003-11-03 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with Nobel Prizes A list of Fields Medallists and their contributions provides a bird s eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from Fields Medallists and so provides a highly interesting and varied picture The second edition of Fields Medallists Lectures features additional contributions from the following Medallists Kunihiro Kodaira 1954 Richard E Borcherds 1998 William T Gowers 1998 Maxim Kontsevich 1998 Curtis T McMullen 1998 and Vladimir Voevodsky 2002 **Finite Mathematics and Its**

Theory of Finite and Infinite Graphs Denes König,2013-11-11 To most graph theorists there are two outstanding landmarks in the history of their subject One is Euler s solution of the Königsberg Bridges Problem dated 1736 and the other is the appearance of Denes König s textbook in 1936 From Königsberg to König s book sings the poetess So runs the graphic tale 10 There were earlier books that took note of graph theory Veblen s Analysis Situs published in 1931 is about general combinato rial topology But its first two chapters on Linear graphs and Two Dimensional Complexes are almost exclusively concerned with the territory still explored by graph theorists Rouse Ball s Mathematical Recreations and Essays told usually without proofs of the major graph theoretical advances of the nineteenth century of the Five Colour Theorem of Petersen s Theorem on I factors and of Cayley s enumerations of trees It was Rouse Ball s book that kindled my own graph theoretical enthusiasm The graph theoretical papers of Hassler Whitney published in 1931 1933 would have made an excellent textbook in English had they been collected and published as such But the honour of presenting Graph Theory to the mathe matical world as a subject in its own right with its own textbook belongs to Denes König Low was the prestige of Graph Theory in the Dirty Thirties It is still remembered with resentment now shading into amuse ment how one mathematician scorned it as The slums of Topol ogy

Sphere Packings, Lattices and Groups John H. Conway,Neil J.A. Sloane,2013-04-17 The main themes This book is mainly concerned with the problem of packing spheres in Euclidean space of dimensions 1 2 3 4 5 Given a large number of equal spheres what is the most efficient or densest way to pack them together We also study several closely related problems the kissing number problem which asks how many spheres can be

arranged so that they all touch one central sphere of the same size the covering problem which asks for the least dense way to cover n dimensional space with equal overlapping spheres and the quantizing problem important for applications to analog to digital conversion or data compression which asks how to place points in space so that the average second moment of their Voronoi cells is as small as possible Attacks on these problems usually arrange the spheres so their centers form a lattice Lattices are described by quadratic forms and we study the classification of quadratic forms Most of the book is devoted to these five problems The miraculous enters the E_8 and Leech lattices When we investigate those problems some fantastic things happen There are two sphere packings one in eight dimensions the E_8 lattice and one in twenty four dimensions the Leech lattice A which are unexpectedly good and very 24 symmetrical packings and have a number of remarkable and mysterious properties not all of which are completely understood even today **Sphere Packings,**

Lattices and Groups John Conway, Neil J. A. Sloane, 2013-06-29 We now apply the algorithm above to find the 121 orbits of norm 2 vectors from the known norm 0 vectors and then apply it again to find the 665 orbits of norm 4 vectors from the vectors of norm 0 and 2 The neighbors of a strictly 24 dimensional odd unimodular lattice can be found as follows If a norm 4 vector $v \in \Lambda$ corresponds to the sum of a strictly 24 dimensional odd unimodular lattice A and a dimensional lattice then there are exactly two norm 0 vectors of Λ having inner product 2 with v and these norm 0 vectors correspond to the two even neighbors of A The enumeration of the odd 24 dimensional lattices Figure 17.1 shows the neighborhood graph for the Niemeier lattices which has a node for each Niemeier lattice If A and B are neighboring Niemeier lattices there are three integral lattices containing $A \cap B$ namely A , B and an odd unimodular lattice C of rank 4 An edge is drawn between nodes A and B in Fig 17.1 for each strictly 24 dimensional unimodular lattice arising in this way Thus there is a one to one correspondence between the strictly 24 dimensional odd unimodular lattices and the edges of our neighborhood graph The 156 lattices are shown in Table 17.1 Figure 17.1 also shows the corresponding graphs for dimensions 8 and 16
