Osif,2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate

engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin Performance-Based Fire Safety Design Morgan J. Hurley, Eric R. Rosenbaum, 2015-04-14 Master an Approach Based on Fire Safety Goals Fire Scenarios and the Assessment of Design Alternatives Performance Based Fire Safety Design demonstrates how fire science can be used to solve fire protection problems in the built environment It also provides an understanding of the performance based design process deterministic and risk based ana *Probabilistic Safety Assessment and Management* Cornelia Spitzer, Ulrich Schmocker, Vinh N. Dang, 2014-01-04 Probabilistic Safety Assessment and Management is a collection of papers presented at the PSAM 7 ESREL 04 Conference in June 2004 The joint Conference provided a forum for the presentation of the latest developments in methodology and application of probabilistic and reliability methods in various industries The aim of these applications is the optimisation of technological systems and processes from the perspective of a risk informed safety management while also taking economic and environmental aspects into account Bringing together leading experts from all over the world the papers reflect a wide variety of disciplines such as principles and theory of reliability and risk analysis systems modelling and simulation consequence assessment human and organisational factors structural reliability methods software reliability and safety insights and lessons from risk studies and management decision making Wood Deterioration, Protection and Maintenance Ladislav Reinprecht, 2016-07-27 WOOD DETERIORATION PROTECTION AND MAINTENANCE Wood has low embodied energy is a renewable resource and can perform extremely well in a range of construction applications so it is not surprising that there is growing interest in the use of wood in new buildings As a natural material wood can be subject to degradation by a range of environmental factors insects bacteria or fungi Advances in the understanding of the degradation processes caused by these factors as well as increased knowledge about boundary environmental conditions and the extractives that suppress the development of timber pests have led to new methods of structural physical and chemical protection of wood and wooden composites The result is that wood can deliver high performance long life buildings and structures with low environmental impact at relatively modest cost Wood Deterioration Protection and Maintenance provides an up to date discussion of the natural durability of wood wood degradation processes and methods of structural physical and chemical protection of wood The important information relating to wood degradation by abiotic and biotic agents in the context of the basic structure of wood is fully discussed showing how structural changes in damaged wood relate to physical and mechanical properties Modern active substances in wood protection and the relationships between preservative properties the anatomical structure and moisture content of wood and protective processes involving pressure and or diffusion driving forces are fully illustrated Mentioned also are principles of wood maintenance together with modes of damaged wood identification sterilization and reconstruction OTHER BOOKS OF INTEREST Wood Modification Chemical Thermal and Other Processes Callum A S Hill Hardback ISBN 9780470021729
